Translation Initiation with 70S Ribosomes A Single Molecule Study

Cristina Remes

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 184

ISSN 1866-1807

ISBN 978-3-95806-358-7

Contents

Summary	1
Zusammenfassung	3
I. Introduction	5
1. General Information	6
1.1. The Ribosome and Ribosomal Subunits	6
1.2. Messenger RNA (mRNA)	8
1.3. Initiation Factors	9
1.3.1. Initiation Factor 1	10
1.3.2. Initiation Factor 3	11
1.3.3. Initiation Factor 2	12
1.4. Bacterial Translation	12
1.5. Trans-translation. The tmRNA Ribosome Rescue System	13
1.6. Modes of Translation Initiation	15
1.6.1. 30S-binding Initiation	15
1.6.2. Initiation with 70S Particles	16
1.6.2.1. Initiation of Leaderless mRNAs	16
1.6.2.2. 70S Scanning Initiation	17
1.6.2.3. Protein Synthesis by Ribosomes with Tethered Subunits	18
2. Evidence of 70S Initiation of Canonical mRNAs. Motivation of this Study.	19
2.1. Why initiation with 70S?	19
2.2. Why single molecule studies?	19
II. Materials and Methods	22
3. Materials and Buffers	23
3.1. Chemicals	23
3.2. Consumables	24
3.3. Fluorescent Dyes	24
3.4. Vectors and Oligonucleotides	25
3.5. Kits and Enzymes	25
3.6. Instruments	25

3.7. Bacterial Strains	27
3.7.1. General Considerations	27
3.7.2. The CAN 20/12-E Strain	27
3.7.3. The ZS-22 Strain	28
3.8. Buffers	30
3.8.1. Purification of Ribosomes	30
3.8.2. Labeling Buffers	31
3.8.3. Microbiological Media	31
3.8.4. Biotinylation	31
3.8.5. Agarose Gel Electrophoresis	32
3.8.6. Western Blot	32
3.8.7. Competent Cells	32
3.8.8. Single Molecule Experiments	33
4. Methods	34
4.1. Analytical Methods	34
4.1.1. Concentration Measurements for Ribosomal Particles	34
4.1.2. Agarose Gel Electrophoresis of DNA	34
4.1.3. Agarose Gel Electrophoresis of RNA	35
4.2. Methods of Microbiology and Molecular Genetics	35
4.2.1. Growing and Storing <i>E.coli</i>	35
4.2.2. Preparation of Chemically Competent Bacteria	36
4.2.3. Transformation of Bacteria	36
4.2.4. Plasmid Isolation	36
4.2.4.1. Minipreps	36
4.2.4.2. Midipreps	37
4.2.5. Linearization of Plasmids with Endonucleases	38
4.3. Purification of Ribosomes and Ribosomal Particles	38
4.3.1. General Considerations for Working with Ribosomes	38
4.3.2. Overview on Sucrose Gradient Centrifugation of Ribosomes	39
4.3.3. Methodological Information	39
4.3.3.1. Rate-zonal Centrifugation Using the Ti-15 Rotor	39
4.3.3.2. Rate-zonal Centrifugation Using the SW32 Ti Rotor	40
4.4. <i>In vivo</i> Biotinylation of Proteins	42
4.4.1. General Information	42
4.4.2. Protocol	42
4.5. Labeling of Proteins Using NHS Fluorescent Dyes	43
4.6. Cell-free Protein Synthesis. The PURE System	43
4.6.1. Overview	43
4.6.2. Sample Preparation	44
4.7. Aliquotization of Dyes	45
4.8. Preparation of Slides for Microscopy Techniques	45
4.9. Oxygen Scavenging System	46
4.10. Confocal Fluorescence Detection	47
4.10.1. Fluorescence Correlation Spectroscopy	47
4.10.2. Two-colour Coincidence Detection	48
4.11. Widefield Imaging	49

III. Results	50
5. Preparation of Reassociated 70S Ribosomes	51
5.1. General Considerations	51
5.2. Preparation of Crude 70S Ribosomes	51
5.3. Preparation and Characterization of Tightly Coupled 70S Ribosomes	53
5.4. Preparation and Characterization of Ribosomal Subunits	53
5.5. Preparation and Characterization of Reassociated 70S Ribosomes	55
6. <i>In vivo</i> Biotinylation of Ribosomes	57
6.1. General Considerations	57
6.2. Procedure	58
6.3. Characterization	59
6.3.1. Identification Using Western Blot	59
6.3.2. Activity of the Biotinylated Ribosomes	60
7. Fluorescent Labeling of Ribosomes Using NHS Functionalized Dyes	61
7.1. General Considerations	61
7.2. Labeling Procedure	61
7.3. Characterization of the Labeled Ribosomes	62
7.3.1. Labeling Ratio	62
7.3.2. FCS	63
7.3.3. Activity of the Labeled Ribosomes	63
8. Hybridization of Functionalized Oligonucleotides to Engineered Ribosomal RNA	64
8.1. General Considerations	64
8.2. Labeling Protocol	65
8.3. Characterization of the Labeled Ribosomes	66
8.3.1. Labeling Ratio	66
8.3.2. Labeling Specificity	66
8.3.3. Detection of Biotin	67
8.3.4. Activity	67
9. Optimizaton of the Plasmid for Single Molecule Experiments	69
9.1. General Considerations	69
9.2. Plasmid Design	70
9.3. Testing the Ribosome Stalling During Nascent Chain Synthesis	71
10. Tethering of biotinylated ribosomes on modified glass slides	73
10.1. General Considerations	73
10.2. Immobilization Strategy	73
11. Activity Test of the Ribosomes	76
11.1. Kinetics of GFPem Synthesis	76
11.2. GFPem Calibration Curve	76
11.3. Activity of the Functionalized Ribosomes	77
11.4. The Influence of Functionalization on the Activity of the Ribosomes	78
11.4.1. Functionalization of the CAN 20/12-E Ribosomes	78

11.4.2. Functionalization of the ZS-22 Ribosomes	79
11.5. Number of Translation Cycles	80
12. Translation Initiation of Canonical mRNA with 70S Ribosomes	81
12.1. Experimental Design	81
12.2. Controls. Stability of the Labeled Ribosomes	83
12.2.1. Stability of the Loop-oligonucleotide Interaction	83
12.2.2. Stability of the Ribosomes in the Reaction System	84
12.3. Results of the Single Molecule Study	86
IV. Discussions	89
13. Discussion	90
13.1. Reassociation of Ribosomes	90
13.2. Functionalization of Ribosomes	91
13.3. Stalling and the Number of Productive Cycles	93
13.4. TCCD Measurements	93
13.5. Surface Passivation for Single Molecule Studies	94
13.6. Initiation of Canonical mRNAs by 70S Ribosomes	95
13.7. Outlook	95
Acknowledgments	97
Bibliography	98
List of Figures	108
List of Tables	110
