# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction</b>   | <b>1</b>  |
| 1.1      | Fusion reactions . . . . .  | 1         |
| 1.2      | Thermonuclear fusion . . . . .  | 2         |
| 1.3      | Magnetic confinement . . . . .  | 4         |
| 1.4      | Plasma heating . . . . .  | 7         |
| 1.5      | The plasma edge and plasma-facing materials . . . . .                 | 8         |
| 1.6      | Modeling of plasma-wall interactions and impurity transport . . . . . | 11        |
| 1.7      | Topic and outline of the thesis . . . . .                             | 13        |
| <b>2</b> | <b>Scientific basis of the ERO code and underlying data</b>           | <b>15</b> |
| 2.1      | General concept and workflow of the ERO code . . . . .                | 15        |
| 2.2      | Plasma-wall interaction . . . . .                                     | 17        |
| 2.2.1    | Erosion . . . . .   | 17        |
| 2.2.2    | Deposition . . . . .  | 28        |
| 2.3      | Impurity transport . . . . .  | 28        |
| 2.3.1    | Motion of a single charged particle . . . . .                         | 29        |
| 2.3.2    | The sheath potential and electric field . . . . .                     | 31        |
| 2.3.3    | Monte-Carlo simulation of collective transport . . . . .              | 34        |
| 2.3.4    | Atomic and molecular data . . . . .                                   | 41        |
| <b>3</b> | <b>ERO2.0 code development</b>  | <b>45</b> |
| 3.1      | Motivation . . . . .  | 45        |
| 3.2      | Massive parallelization . . . . .                                     | 46        |
| 3.2.1    | Introduction . . . . .  | 46        |
| 3.2.2    | Parallelization with MPI and OpenMP . . . . .                         | 47        |
| 3.2.3    | The JURECA supercomputer . . . . .                                    | 49        |
| 3.2.4    | Parallelization of ERO2.0 . . . . .                                   | 50        |
| 3.3      | Coordinate system and wall geometry . . . . .                         | 54        |
| 3.4      | Optimized query operations on polygon meshes . . . . .                | 58        |
| 3.5      | File format and structure . . . . .                                   | 65        |

## CONTENTS

|                     |  |            |
|---------------------|--|------------|
| 3.6                 | 3D plasma background and domain decomposition . . . . .              | 67         |
| 3.7                 | Sparse matrices for storing 3D impurity and emission densities . . . | 73         |
| 3.8                 | Magnetic field line tracing . . . . .                                | 75         |
| <b>4</b>            | <b>ERO2.0 modeling of Be erosion at JET-ILW</b>                      | <b>79</b>  |
| 4.1                 | Beryllium erosion experiments at JET-ILW . . . . .                   | 81         |
| 4.2                 | Global ERO2.0 modeling . . . . .                                     | 86         |
| 4.2.1               | Wall geometry . . . . .  | 87         |
| 4.2.2               | Plasma backgrounds . . . . .   | 88         |
| 4.2.3               | Be erosion of and deposition on the limiters . . . . .               | 93         |
| 4.2.4               | Be migration . . . . .   | 95         |
| 4.2.5               | Benchmarking with infrared cameras . . . . .                         | 101        |
| 4.2.6               | Benchmarking with wide-angle cameras . . . . .                       | 105        |
| 4.3                 | Effective Be sputtering yield . . . . .                              | 112        |
| 4.3.1               | Local modeling . . . . .   | 113        |
| 4.3.2               | Global modeling . . . . .  | 116        |
| <b>5</b>            | <b>Summary, conclusions and outlook</b>                              | <b>121</b> |
| 5.1                 | Code development and global modeling results . . . . .               | 121        |
| 5.2                 | Possible modeling improvements and future applications . . . . .     | 123        |
| <b>Appendices</b>   |  | <b>127</b> |
| <b>Appendix A</b>   | <b>ERO2.0 code profiling</b>   | <b>128</b> |
| <b>Appendix B</b>   | <b>Classification of parallel computer systems</b>                   | <b>131</b> |
| <b>Appendix C</b>   | <b><math>Z_{\text{eff}}</math> and Be plasma concentration</b>       | <b>133</b> |
| <b>Appendix D</b>   | <b>Simple model for the steady state erosion</b>                     | <b>135</b> |
| <b>Bibliography</b> |  | <b>138</b> |
