Partitioning Water Vapor Fluxes by the Use of Their Water Stable Isotopologues: From the Lab to the Field

Maria Elisabeth Quade

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment Band / Volume 469

ISSN 1866-1793 ISBN 978-3-95806-417-1

Table of Content

Abstract I

Zusammenfassung III

List of publications included in this thesis V

List of Abbreviations and Variables XI

List of Figures XIII

List of Tables XVI

Chapter 1 1

1.1 Introduction 3

1.1 The Craig and Gordon (1965) model 5

1.2 Objectives and outline of the thesis 9

Chapter 2 Investigation of Kinetic Isotopic Fractionation of Water during Bare Soil Evaporation 11

2.1 Introduction 13

2.2 Material and methods 15

2.2.1 Soil measurements 15

2.2.2 Atmospheric measurements 17

2.2.3 Sampling protocol 17

2.2.4 Determination of δ_E and δ_{EF} for the computation of α_K from the Craig and Gordon model 18

2.2.5 Sensitivity of α_K to aerodynamic conditions 21

2.3 Results 22

2.3.1 Atmosphere column 22

2.3.2 $\delta^{18}O$-$\delta^{2}H$ relationship for laboratory air water vapor and soil liquid water 22

2.3.3 Soil and atmospheric profiles 24

2.3.4 Isotopic composition of evaporation and kinetic fractionation factor 27

2.4 Discussion 32

2.5 Conclusion 36

Chapter 3 In-situ Monitoring of Soil Water Isotopic Composition for Partitioning of Evapotranspiration during One Growing Season of Sugar Beet (Beta vulgaris) 39

3.1 Introduction 41

3.2 Material and methods 43

3.2.1 Study site ... 43
3.2.2 Isotopic monitoring set-up and measurement protocol ... 44
3.2.3 Destructive measurements for isotopic analysis ... 46
3.2.4 Determination of the end-members of the isotopic mixing equation ... 47
3.2.5 Micro-lysimeters and eddy covariance measurements ... 48
3.4 Results ... 49
3.4.1 Soil and atmospheric measurements ... 49
3.4.2 *ET* partitioning ... 53
3.4.3 Latent heat flux of *E* and *ET* ... 56
3.5 Discussion ... 59
3.5.1 Differences between destructive and non-destructive methods ... 59
3.5.2 Sensitivity of *T*/*ET* estimates to uncertainty of δ_E, δ_T, and δ_{ET} values ... 61
3.5.3 From *T*/*ET* to ecosystem latent heat fluxes ... 63
3.6 Conclusion ... 64
Chapter 4 Progress and Challenges of Isotope Based Source Partitioning of Evapotranspiration ... 65
4.1 Introduction ... 67
4.2 Isotopic composition of evapotranspiration ... 70
4.2.1 Methods ... 70
4.2.2 Progress and challenges ... 72
4.3 Isotopic composition of evaporated water vapor ... 74
4.3.1 Methods ... 74
4.3.2 Progress and challenges ... 75
4.4 Isotopic composition of transpired water vapor ... 78
4.4.1 Methods ... 78
4.4.2 Progress and challenges ... 80
4.5 Conclusion and outlook ... 81
Chapter 5 ... 83
5.1 Synopsis ... 85
5.2 Synthesis ... 87
5.3 Conclusions and Outlook ... 89
5.3.1 Perspective of the gas-permeable tubing ... 89
5.3.2 Investigation of the kinetic fractionation factor ... 89

5.4 Acknowledgements 90
Appendix A. Example of measuring sequence 91
Appendix B. Example of Keeling plot regression lines on DoE 73 92
Appendix C: Error calculation on the kinetic fractionation factor α_K 93
Appendix D: Calibration with the two standard vessels 96
Appendix E: Overview on the reviewed studies 98
