# Contents

Chapter 1 Introduction and Goals of the Work .....	1
1.1 The electrochemical corrosion of metallic materials in the simulated HT-PEFC environment .....	3
1.2 An electrochemical corrosion study of suitable coatings in the simulated HT-PEFC environment .....	3
1.3 The electrochemical corrosion behavior of suitable coatings with artificially created defects in simulated HT-PEFC environments .....	4
1.4 The Performance and durability of HT-PEFC employing different types of bipolar plates ..	4
1.5 Outline.....	4
Chapter 2 Theory and Literature Overview .....	7
2.1 A general overview of the HT-PEFC .....	7
2.2 Electrochemical corrosion .....	10
2.3 The degradation of the bipolar plates.....	15
Chapter 3 The Experiment Methods .....	21
3.1 Electrochemical corrosion cells .....	21
3.2 Single Cell Test .....	28
3.3 Material characterization .....	33
Chapter 4 The Electrochemical Corrosion of Metallic Material in Phosphoric Acid .....	37
4.1 Potentiodynamic tests .....	37
4.2 The free corrosion potential of SS316L with a corroded surface .....	39
4.3 Potentiostatic Tests.....	41
4.4 SEMs of specimens after potentiostatic tests.....	43
4.5 ICP-OES measurements.....	45
4.6 Interfacial contact resistance.....	47
4.7 The XPS depth profile.....	48
4.8 Summary .....	51
Chapter 5 An Electrochemical Corrosion Study of CrN/Cr Coated SS316L in Phosphoric Acid.	53
5.1 Coating characterizations.....	53
5.2 Corrosion resistance and stability .....	54
5.3 Electrochemical impedance spectroscopy .....	57
5.4 Interfacial contact resistance.....	60

---

5.5 Summary .....	61
Chapter 6 The Influence of Oxygen on the Electrochemical Behaviour of CrN/Cr Coating with Artificially Induced Defects on SS316L in the Simulated Cathodic Environment of an HT-PEFC .....	63
6.1 Coating characterizations .....	63
6.2 Potentiodynamic polarization tests .....	64
6.3 The stability of the CrN/Cr coating with artificially induced defects in the simulated cathodic environment of the HT-PEFC .....	66
6.4 SEM after corrosion tests .....	68
6.5 Electrochemical impedance spectroscopy .....	69
6.6 Summary .....	74
Chapter 7 The Performance and Durability of HT-PEFCs with Different Types of Bipolar Plates .....	77
7.1 CrN/Cr coating in real bipolar plates .....	77
7.2 Single-cell performance and durability .....	79
7.3 Electrochemical Impedance Spectroscopy .....	80
7.4 Surface analyzation after 1000 h durability tests .....	83
7.5 ICP-OES measurements .....	87
7.6 Interfacial contact resistance .....	88
7.7 Summary .....	89
Chapter 8 Discussion .....	91
8.1 The economic advantages of metallic bipolar plates .....	92
8.2 The technical advantages of metallic bipolar plates .....	93
8.3 The corrosion rates and interfacial conductivities of bare and CrN/Cr coated metallic bipolar plates .....	93
8.4 The effect of oxygen on the corrosion behavior of the passive layer of the bare SS316L specimen and the CrN/Cr coated SS316L specimen with artificially induced defects .....	95
8.5 Cell performance .....	96
Chapter 9 Conclusion .....	97
References .....	99
List of Figures .....	113
List of Tables .....	117
Acknowledgements .....	119
