# Table of Contents

<b>Abstract</b>	<b>3</b>
<b>Table of Contents</b>	<b>5</b>
<b>1 Introduction</b>	<b>9</b>
<b>2 Theoretical foundations</b>	<b>15</b>
2.1 The many-body problem . . . . .	16
2.2 Density functional theory (DFT) . . . . .	16
2.2.1 Approximations to the exchange-correlation energy functional . . . . .	18
2.2.2 DFT for spin-polarized systems . . . . .	18
2.3 Green functions and embedding technique . . . . .	19
2.3.1 Ground state expectation value of an observable from the Green function . . . . .	21
2.4 The Korringa-Kohn-Rostoker Green function method . . . . .	21
2.4.1 Free electrons . . . . .	22
2.4.2 Single site problem . . . . .	23
2.4.3 Multiple scattering problem . . . . .	25
2.4.4 Charge neutrality and Lloyd's formula . . . . .	26
2.4.5 Spin-orbit interaction in KKR . . . . .	27
2.4.6 KKR in a projection basis . . . . .	29
2.5 Magnetic anisotropy . . . . .	30
2.5.1 Magnetic force theorem . . . . .	31
2.5.2 The torque method . . . . .	32
2.6 Time-dependent density functional theory (TD-DFT) . . . . .	34
2.6.1 Linear response theory within TD-DFT . . . . .	35
2.6.2 Spin splitting sum rule . . . . .	38
2.6.3 Taylor expansion of the Kohn-Sham susceptibility . . . . .	39
2.6.4 Mapping TD-DFT into the Landau-Lifshitz-Gilbert equation . . . . .	40
2.6.5 Zero-point spin-fluctuations . . . . .	42
2.6.6 Renormalization of the magnetic anisotropy energy . . . . .	43

2.7	Technical aspects of the KKR codes and new implementations . . . . .	45
2.7.1	KKR codes available in Jülich . . . . .	45
2.7.2	New implementations in the KKR-impurity and KKR-susc codes . . . . .	45
<b>3</b>	<b>Scattering of Rashba electrons off magnetic impurities</b>	<b>49</b>
3.1	Rashba Hamiltonian . . . . .	50
3.2	Rashba Green function . . . . .	51
3.3	Transition matrix . . . . .	53
3.4	Friedel oscillations . . . . .	55
3.4.1	Friedel oscillations in the induced charge density . . . . .	56
3.4.2	Friedel oscillations in the induced spin magnetization density . . . . .	57
3.5	Interactions among magnetic impurities deposited on a Rashba electron gas . . . . .	57
3.5.1	Extended Heisenberg model . . . . .	58
3.5.2	Mapping procedure . . . . .	59
3.6	Magnetic properties of dimers . . . . .	60
3.6.1	RKKY-approximation . . . . .	60
3.6.2	Beyond the RKKY-approximation . . . . .	64
3.6.3	Connecting the different parts of the exchange interaction tensor . . . . .	65
3.6.4	Magnetic configurations of dimers . . . . .	66
3.7	Magnetic properties of complex nanostructures . . . . .	69
3.7.1	Magnetism of linear chains . . . . .	70
3.7.2	Trimer . . . . .	70
3.7.3	Hexagon . . . . .	71
3.7.4	Heptamer . . . . .	73
3.8	Transport properties of Rashba electrons . . . . .	75
3.8.1	Scattering States . . . . .	75
3.8.2	Cylindrical expansion of the Green function and the t-matrix . . . . .	77
3.8.3	Residual resistivity tensor from linear response theory . . . . .	78
3.8.4	Resistivity tensor in absence of the spin-orbit interaction . . . . .	79
3.8.5	Residual resistivity tensor within the s-wave approximation . . . . .	80
3.8.6	Residual resistivity tensor results and discussions . . . . .	82
3.9	Orbital magnetization in a Rashba electron gas . . . . .	88
3.9.1	Rashba spin-orbit interaction as a vector field . . . . .	90
3.9.2	Ground state charge current induced by a single magnetic impurity on a Rashba electron gas . . . . .	91
3.9.3	Orbital magnetization of magnetic impurities on a Rashba electron gas from ground state charge currents . . . . .	93
3.9.4	Orbital magnetization of a single adatom on a Rashba electron . . . . .	95
3.9.5	Orbital magnetization of a dimer on a Rashba electron gas from ground state charge currents . . . . .	96
3.9.6	Orbital magnetization of trimer on a Rashba electron gas from ground state charge currents . . . . .	97
3.10	From Rashba surface states to topological insulators . . . . .	102
3.11	Summary and outlook . . . . .	104

<b>4</b>	<b>Magnetic impurities in topological insulators</b>	<b>107</b>
4.1	Introduction to topological insulators . . . . .	108
4.2	$\text{Bi}_2\text{Te}_3$ and $\text{Bi}_2\text{Se}_3$ as prototypical topological insulators . . . . .	113
4.3	Ground state properties of $3d$ and $4d$ magnetic impurities embedded in $\text{Bi}_2\text{Te}_3$ and $\text{Bi}_2\text{Se}_3$ . . . . .	115
4.3.1	$3d$ magnetic impurities embedded in $\text{Bi}_2\text{Te}_3$ surface . . . . .	117
4.3.2	$4d$ magnetic impurities embedded in $\text{Bi}_2\text{Te}_3$ surface . . . . .	120
4.3.3	$3d$ and $4d$ magnetic impurities embedded in $\text{Bi}_2\text{Se}_3$ surface . . . . .	122
4.4	Investigating the in-gap states . . . . .	123
4.5	Anderson model for the in-gap states . . . . .	124
4.6	Magnetocrystalline anisotropy . . . . .	129
4.6.1	Magnetocrystalline anisotropy for $3d$ and $4d$ impurities in $\text{Bi}_2\text{Te}_3$ . . . . .	130
4.6.2	Magnetocrystalline anisotropy and real space cluster size . . . . .	134
4.6.3	Magnetocrystalline anisotropy for $3d$ and $4d$ impurities in $\text{Bi}_2\text{Se}_3$ . . . . .	137
4.6.4	Magnetocrystalline anisotropy for $3d$ and $4d$ impurities in bulk $\text{Bi}_2\text{Te}_3$ . . . . .	137
4.7	Spin dynamics of $3d$ and $4d$ impurities in topological insulators . . . . .	140
4.7.1	Transversal dynamical response . . . . .	142
4.7.2	Spin excitations of $3d$ impurities in $\text{Bi}_2\text{Te}_3$ . . . . .	142
4.7.3	Spin excitations of $4d$ impurities in $\text{Bi}_2\text{Te}_3$ . . . . .	144
4.7.4	Spin excitations of $3d$ and $4d$ impurities in $\text{Bi}_2\text{Se}_3$ . . . . .	147
4.7.5	Impact of the surface state on spin excitations of $3d$ and $4d$ impurities in $\text{Bi}_2\text{Te}_3$ . . . . .	149
4.7.6	Transversal zero-point spin-fluctuations of $3d$ and $4d$ impurities in $\text{Bi}_2\text{Te}_3$ and $\text{Bi}_2\text{Se}_3$ . . . . .	149
4.7.7	Renormalization of the MAE from the ZPSF . . . . .	153
4.8	Summary and outlook . . . . .	154
<b>5</b>	<b>Magnetic Skyrmions</b>	<b>157</b>
5.1	Introduction to magnetic Skyrmions . . . . .	158
5.2	Magnetic Skyrmions in Pd/Fe/Ir(111) . . . . .	159
5.3	Tunneling spin-mixing magnetoresistance . . . . .	159
5.3.1	TXMR from multiple scattering theory . . . . .	162
5.3.2	TXMR in the Alexander-Anderson model . . . . .	164
5.4	Chiral orbital magnetization . . . . .	165
5.4.1	Chiral orbital magnetization in Pd/Fe/Ir(111) . . . . .	166
5.4.2	Connection between TOM and topological charge . . . . .	170
5.5	Summary and outlook . . . . .	171
<b>6</b>	<b>Conclusions</b>	<b>173</b>
<b>A</b>	<b>Derivation of the t-matrix in the s-wave approximation</b>	<b>177</b>
<b>B</b>	<b>Extended Heisenberg model for a magnetic dimer</b>	<b>179</b>
<b>C</b>	<b>Asymptotic expansion of the Rashba Green function</b>	<b>181</b>

<b>D Evaluation of the momentum operator matrix elements</b>	<b>183</b>
<b>E Phenomenological derivation of the functional forms</b>	<b>185</b>
<b>F Derivation of the current operator</b>	<b>189</b>
<b>Bibliography</b>	<b>191</b>
<b>List of publications</b>	<b>211</b>
<b>List of tables</b>	<b>213</b>
<b>List of figures</b>	<b>217</b>
<b>Acknowledgments</b>	<b>227</b>
