Contents

Abstract	i
Zusammenfassung	iii
List of Figures	viii
List of Tables	xi
List of Abbreviations	xiii
List of Symbols	xv
1 Introduction	1
1.1 Motivation	1
1.2 Partitioning of net fluxes of CO ₂ and H ₂ O	2
1.3 Thesis objectives	4
2 High-resolution vertical profile measurements for carbon dioxide and water vapour concentrations within and above crop canopies	9
2.1 Introduction	9
2.2 Methods	10
2.2.1 Test site	10
2.2.2 Eddy-covariance and other continuous measurements	11
2.2.3 Profile measurement set-up	12
2.2.4 Profile data processing	14
2.2.5 Profile shape validation and flux determination using Monin-Obukhov similarity theory	16
2.3 Results and discussion	17
2.3.1 Raw data processing diagnostics	17
2.3.2 Profiles of CO ₂ and H ₂ O over a winter wheat plant growing season	20
2.3.3 Diurnal cycle of profiles of CO ₂ , H ₂ O, temperature and wind speed over winter barley and bare soil	22
2.3.4 Comparison of profile-derived and eddy-covariance fluxes	24
2.4 Conclusion and outlook	26
3 CO₂ fluxes before and after partial deforestation of a Central European spruce forest	29
3.1 Introduction	29
3.2 Material and Methods	30

3.2.1	Test site and forest management	30
3.2.2	Eddy-covariance measurements and quality control	31
3.2.3	Measurements of meteorological parameters	33
3.2.4	Chamber measurements	34
3.2.5	Gap-filling and source-partitioning	35
3.2.6	Assessment of albedo effect	36
3.3	Results and Discussion	37
3.3.1	Meteorological conditions during the observation period	37
3.3.2	Analyses of flux quality and flux dynamics	38
3.3.3	Diurnal, seasonal and interannual changes in carbon fluxes of forest and clearcut before and after deforestation	40
3.3.4	Annual carbon fluxes of forest and clearcut before and after deforestation	41
3.3.5	Albedo effect	44
3.3.6	Comparison of soil respiration and its contribution to ecosystem res- piration	45
3.4	Summary and conclusion	47
4	The carbon budget of a 3-year crop rotation: using three different non- linear regression CO₂ flux partitioning approaches	49
4.1	Introduction	49
4.2	Methods	50
4.2.1	Study site	50
4.2.2	Crop management	51
4.2.3	Eddy-covariance measurements and flux data treatment	53
4.2.4	Ancillary micrometeorological measurements	54
4.2.5	Biometric measurements	54
4.2.6	CO ₂ flux source-partitioning: Non-linear regression approaches	55
4.2.7	Crop carbon budget calculations	60
4.3	Results and discussion	61
4.3.1	Site meteorology	61
4.3.2	Crop development	61
4.3.3	Flux measurement availability and quality	63
4.3.4	Inter-annual variability of CO ₂ -fluxes	64
4.3.5	Cumulated CO ₂ -fluxes	66
4.3.6	Comparison of flux-partitioning tools	68
4.4	Conclusion	72
5	Overall conclusions and outlook	73
	References	75
	Appendix	92
	Appendix A1	92
	Appendix A2	93
	Appendix B	94
	Danksagung	95
