Contents

Developing Exascale Computing at JSC

<i>E. Suarez, W. Frings, S. Achilles, N. Attig, J. de Amicis, E. Di Napoli, Th. Eickermann, E. B. Gregory, B. Hagemeier, A. Herten, J. Jitsev, D. Krause, J. H. Meinke, K. Michielsen, B. Mohr, D. Pleiter, A. Strube, Th. Lippert</i>	1
--	---

The NIC Research Groups

A Study of the Kinetic Freeze-Out in Relativistic Heavy Ion Collisions with the UrQMD/Coarse Graining Approach	23
<i>G. Inghirami, P. Hillmann, B. Tomášik, M. Bleicher</i>	
Cut-Off Effects on the QCD Thermal Transition as a Function of Quark Masses and Chemical Potential	33
<i>F. Cuteri, O. Philipsen, A. Schön, A. Sciarra</i>	
Heavy Quarks, Multi-Level Algorithms and Tensor Networks: Developing Methods for Non-Perturbative Aspects of Quantum Field Theories	43
<i>K. Jansen, S. Schaefer, H. Simma, R. Sommer</i>	
Simulating Thioflavin T and Congo Red Binding to the Fibril Structure of Amyloid-β(1-42)	53
<i>B. Frieg, H. Gohlke</i>	
Massively Parallel Large-Scale Multi-Model Simulation of Tumour Development Including Treatments	63
<i>M. Berghoff, J. Rosenbauer, A. Schug</i>	

The NIC Excellence Projects

Quantum Chemical Modelling of Water Splitting: From Photoelectrochemistry to Superlubricity	75
<i>L. Mayrhofer, G. Moras, T. Kuwahara, A. Held, M. Moseler</i>	
Machine Learning Transport Properties in Quantum Many-Fermion Simulations	85
<i>C. Bauer, S. Trebst</i>	

Cooperation of Many-Body Physics and Defect Chemistry in Transition-Metal Oxides	
<i>F. Lechermann</i>	93
SDS Adsorptions Films at the H₂O–Au(111) Interface: Molecular Dynamics Study of AFM Tip–Surface Contact	
<i>J. Hörmann, L. Pastewka</i>	101

Astrophysics

Introduction	
<i>P. L. Biermann</i>	111
Realising the LOFAR Two-Metre Sky Survey	
<i>A. Drabent, M. Hoeft, A. P. Mechev, J. B. R. Oonk, T. W. Shimwell, F. Sweijen, A. Danezi, C. Schrijvers, C. Manzano, O. Tsigenov, R.-J. Dettmar, M. Brüggen, D. J. Schwarz</i>	113
A Song of Shocks and Dynamo: Numerical Studies of a Galaxy Cluster Merger in the HIMAG Project	
<i>D. Wittor, P. Domínguez-Fernández, F. Vazza, M. Brüggen</i>	123

Computational Biology and Biophysics

Introduction	
<i>Y. Goldscheider, W. Wenzel</i>	135
Conformational Analysis of Dual-Scale Simulations of Ubiquitin Chains	
<i>A. Berg, C. Peter</i>	137
Solvent Effects on the Binding of Fatty Acids to Human Serum Albumin	
<i>P. Pant, Y. B. Ruiz-Blanco, E. Sanchez-Garcia</i>	147

Elementary Particle Physics

Introduction	
<i>S. Schaefer</i>	159
Nuclear Lattice Effective Field Theory: Status and Perspectives	
<i>U.-G. Meißner for the NLEFT Collaboration</i>	161

Flavour Structure of the Baryon Octet	175
<i>G. S. Bali, S. Collins for the RQCD Collaboration</i>	
Scale Setting for QCD with Four Dynamical Quarks	185
<i>R. Höllwieser, F. Knechtli, T. Korzec</i>	
QCD Phase Transition in the Chiral Limit	193
<i>O. Kaczmarek, F. Karsch, A. Lahiri, L. Mazur, C. Schmidt</i>	
Higher Order Fluctuations and Correlations of Conserved Charges from Lattice QCD	207
<i>S. Borsanyi, Z. Fodor, J. N. Guenther</i>	

Materials Science

Introduction	
<i>R. O. Jones</i>	219
A First-Principles Study on the Role of Defects and Impurities in β-In₂S₃	221
<i>E. Ghorbani, K. Albe</i>	
Numerical Simulations of Wave Propagation: Time Reverse Imaging and Defect Mapping in Pipes	231
<i>E. H. Saenger, C. Werner, L. T. Nguyen, G. K. Kocur, B. Ahrens</i>	

Theoretical Condensed Matter

Introduction	
<i>K. Binder, F. B. Anders</i>	245
Optical Pumping of Electron Spins in Quantum Dot Ensembles	247
<i>I. Kleinjohann, A. Fischer, N. Jäschke, F. B. Anders</i>	
Benchmarking Supercomputers with the Jülich Universal Quantum Computer Simulator	255
<i>D. Willsch, H. Lagemann, M. Willsch, F. Jin, H. De Raedt, K. Michielsen</i>	
Numerical Simulations of Strongly Correlated Electron Systems	265
<i>F. F. Assaad</i>	

Computational Soft Matter Science

Introduction

K. Kremer

277

Do We Understand the Collective Short-Time Dynamics in Multicomponent Polymer Melts?

M. Müller, G. Wang, Y. Ren

279

Molecular Dynamics Simulations of Curcumin in the Interface Region of Tri-block Copolymer Micelles

K. P. K. Luft, S. Gekle

289

Earth and Environment

Introduction

T. Jung

299

Data Assimilation with the Integrated Terrestrial System Model TSMP-PDAF

H.-J. Hendricks Franssen, W. Kurtz, B. Naz, S. Gebler

301

Uncertainty in Terrestrial Water Cycle Simulations

P. Shrestha, M. Sulis, S. Poll, T. Hoar, H.-J. Hendricks Franssen, C. Simmer, S. Kollet

311

Applications of Seismic Full-Waveform Inversion on Shallow-Seismic and Ultrasonic Data

T. Bohlen, Y. Pan, J. Müller

321

Computer Science and Numerical Mathematics

Introduction

D. Kröner

333

Massively Parallel Multigrid with Direct Coarse Grid Solvers

M. Huber, N. Kohl, P. Leleux, U. Rüde, D. Thöennes, B. Wohlmuth

335

BEAM-ME: Accelerating Linear Energy Systems Models by a Massively Parallel Interior Point Method

T. Breuer, M. Bussieck, K.-K. Cao, F. Fiand, H. C. Gils, A. Gleixner, D. Khabi, N. Kempke, T. Koch, D. Rehfeldt, M. Wetzel

345

Fluid Mechanics and Engineering

Introduction

C. Stemmer

355

Machine Learning Applications in Convective Turbulence

R. Kräuter, D. Krasnov, A. Pandey, C. Schneide, K. Padberg-Gehle, D. Giannakis, K. R. Sreenivasan, J. Schumacher

357

High-Performance Flow Simulation and Scale-Adaptive Turbulence Modelling of Centrifugal Pumps

M. Hundshagen, N. Casimir, A. Pesch, R. Skoda

367

Sub-Grid Scale Modelling at Scale with Deep Learning and up to 60 Billion Degrees of Freedom

M. Bode, D. Denker, J. Jitsev, H. Pitsch

379

Size, Shape, Density and Spectral Analysis of Nanoparticles by Analytical Ultracentrifugation Using UltraScan

M. J. Uttinger, S. E. Wawra, J. Walter, W. Peukert

389

Computational Plasma Physics

Introduction

K.-H. Spatschek

403

Collective Effect of Radiation Friction in Laser-Driven Hole Boring of Dense Plasma Targets

T. Liseykina, D. Bauer, S. Popruzhenko, A. Macchi

405

Particle-in-Cell Simulation Studies for Hybrid Laser-Plasma Accelerators and Plasma Eyepieces

M. Zeng, A. Martinez de la Ossa, J. Osterhoff

415

The John von Neumann Institute for Computing (NIC) was established in 1998 by Forschungszentrum Jülich and Deutsches Elektronen-Synchrotron DESY to support the supercomputeroriented simulation sciences. In 2006, GSI Helmholtzzentrum für Schwerionenforschung joined NIC as a contract partner.

The core task of NIC is the peer-reviewed allocation of supercomputing resources to computational science projects in Germany and Europe. The NIC partners also support supercomputer-aided research in science and engineering through a three-way strategy:

- Provision of supercomputing resources for projects in science, research, and industry.
- Supercomputer-oriented research and development by research groups in selected fields of physics and natural sciences.
- Education and training in all areas of supercomputing by symposia, workshops, summer schools, seminars, courses, and guest programmes for scientists and students.

The NIC Symposium is held biennially to give an overview on activities and results obtained by the NIC projects in the last two years. The contributions for this 10th NIC Symposium are from projects that have been supported by the supercomputers JURECA, JUQUEEN and JUWELS in Jülich. They cover selected topics in the fields of Astrophysics, Biology and Biophysics, Elementary Particle Physics, Materials Science, Theoretical Condensed Matter, Soft Matter Science, Earth and Environment, Computer Science and Numerical Mathematics, Fluid Mechanics and Engineering, and Plasma Physics.
