Contents

	Page
Abstract	3
Zusammenfassung	5
Conventions and abbreviations	13
1 Introduction	15
2 Theory of spin waves	21
2.1 Introduction to magnetism	21
2.1.1 Magnetic moment and magnetization	22
Orbital angular momentum	22
Spin angular momentum	23
2.1.2 Magnetic moment origin	23
Isolated atom	23
Localized magnetism	25
Itinerant magnetism - Hubbard model	25
2.1.3 Zeeman energy	26
2.1.4 Magnetic exchange interaction	28
Symmetric and antisymmetric eigenfunctions	29
Pauli's exclusion principle	30
Effective spin hamiltonian	30
Origin of the exchange coupling	31
2.1.5 Spin-orbit coupling: MCA and DMI	32
Magnetocrystalline anisotropy	33
Dzyaloshinskii-Moriya interaction	34
2.1.6 Generalized Heisenberg Hamiltonian	34
2.2 Classical ground-state spin configurations	35
2.2.1 Ferromagnetic and antiferromagnetic ground states	36
2.2.2 Cycloidal spin spirals - Analytical solution	36
2.2.3 Skyrmion lattice - Atomistic spin dynamics simulation	38
2.3 Introduction to spin waves	39
2.3.1 Quantum theory of spin waves	41
Spin circular components	42
Holstein-Primakoff transformation	42
Magnons: the spin-wave quanta	43
Spin-wave spectrum	44

2.4	Spin waves in noncollinear magnets	46
2.4.1	Local reference frame and Holstein-Primakoff transformation	46
2.4.2	Diagonalization and Bogoliubov transformation	48
2.4.3	Spin-wave dispersion of: a ferromagnet, a spin-spiral and a skyrmion lattice	50
	Spin-wave dynamics	50
2.5	Angular momentum of spin waves in noncollinear magnets	51
2.6	Summary	54
3	First-principles parametrization of the Heisenberg Hamiltonian	57
3.1	Introduction	57
3.1.1	Schrödinger equation and wavefunction	58
3.1.2	Born-Oppenheimer approximation	59
3.2	Density functional theory - DFT	59
3.2.1	Hohenberg and Kohn theorem	59
3.2.2	Kohn and Sham equation	60
3.2.3	Local density approximation - LDA	62
3.3	Korringa-Kohn-Rostoker method - KKR	62
3.3.1	Green-function basics	62
3.3.2	Atomic sphere approximation - ASA	64
3.3.3	Single-site problem	65
	Spherical potential of finite range	66
3.3.4	Structural problem	66
	Structural Green function with spherical potential	67
	Energy integration	68
3.3.5	Full potential	68
3.3.6	Spin-orbit coupling	69
3.3.7	KKR self-consistent cycle	70
3.4	Parametrization of the Heisenberg model	70
3.4.1	Infinitesimal-rotations method for the MEI and DMI	71
	Energy difference between states with local spin flips	71
	Infinitesimal-rotations method	72
	Relativistic effects	73
	Magnetocrystalline anisotropy - MCA	74
3.5	Conclusions	74
4	Inelastic-scattering theory	75
4.1	Scattering theory	75
4.1.1	General framework	75
4.1.2	Transition probability	77
4.1.3	Scattering rate	78
4.1.4	Inelastic scattering rate	79
	Spin-spin correlation tensor	80
	Polarization tensor	80
4.2	Spin-spin correlation tensor for noncollinear magnets	81
4.3	Summary	83

Appendices	85
4.A Summation of exponentials over lattice points	85
5 Surface-reconstructed Co ultrathin films on W(110)	87
5.1 Introduction	87
5.2 Spin waves in an inhomogeneous ferromagnet	88
5.2.1 Unfolding of the spin-wave spectrum	89
5.3 Ground state properties	91
5.3.1 Atomic structure	92
5.3.2 Magnetic moments and electronic structure	93
5.3.3 Magnetic exchange interactions	94
5.3.4 Focusing origin	95
5.4 Spin-wave dispersions	98
5.4.1 Free-standing versus supported films	98
5.4.2 Theoretical vs experimental dispersion	101
5.5 Conclusions	104
Appendices	107
5.A Spin-wave eigenvalues and eigenvectors of inhomogeneous ferromagnets	107
5.B Direct theory-experiment comparison	109
6 Spin-resolved electron-energy-loss spectroscopy (SREELS)	111
6.1 Introduction and motivation	111
6.2 Experimental proposal	112
6.3 SREELS of different magnetic phases	114
6.3.1 Ferromagnet	114
6.3.2 Spin spiral	115
6.3.3 Skyrmion lattice	117
6.4 Conclusions and discussion	118
7 Antiferromagnetic noncollinear spin textures	121
7.1 Antiferromagnetism in a spin chain	121
7.1.1 The effect of the DMI and the magnetic field in the spin waves of collinear antiferromagnets	122
7.1.2 Antiferromagnetic spin spiral	123
7.2 Two-dimensional antiferromagnets	125
7.2.1 Antiferromagnetic spin spirals and Rashba spin locking	126
7.2.2 Antiferromagnetic skyrmions	128
7.3 First-principles investigation of Mn/ β -W	130
7.3.1 The crystal structure	131
7.3.2 Magnetic exchange and Dzyaloshinskii-Moriya interactions	132
7.3.3 Magnetic ground state and spin-wave dispersion	133
7.4 First-principles study of Mn ₅ Si ₃	135
7.4.1 Ground-state magnetic properties	135
7.4.2 Spin-wave dispersion	137
7.4.3 Analytical study	138
Ground-state spin configuration	138
Spin waves	139

7.5	Conclusions	140
Appendices		143
7.A	Spin spiral in an antiferromagnetic square lattice	143
7.B	Analytical spin-wave dispersion: 1-D antiferromagnetic spin chain under a perpendicular magnetic field	144
7.B.1	Spin-wave energies	144
7.B.2	Analytical solution	146
	For $k \ll J$:	147
	In the absence of anisotropy:	147
	In the absence of field:	147
8	Prediction of the existence of in-plane magnetic skyrmions in Co/W(110)	149
8.1	Introduction	149
8.2	Atomic structure and space group	152
8.3	Magnetic interactions	153
8.3.1	Magnetic moments	153
8.3.2	Magnetocrystalline anisotropy	154
8.3.3	Dzyaloshinskii-Moriya interaction	156
8.3.4	Magnetic exchange interaction	158
8.3.5	MEI and DMI spatial decay	159
8.4	Micromagnetic analytics	159
8.4.1	Stiffness and spiralization tensors	159
8.4.2	Comparison with the experimental data	164
8.4.3	Ground-state spin configurations from the micromagnetic model	165
8.5	Atomistic-spin-dynamics simulations	167
8.5.1	Reconstructed 1ML: in-plane-averaged interactions	167
	In-plane skyrmion stability	168
	Skyrmion outskirts	171
	Spin spirals	172
8.5.2	Reconstructed 1ML: supercell interactions	175
8.5.3	Pseudomorphic 1ML	178
8.6	In-plane skyrmion model	179
8.6.1	Spin waves in an in-plane skyrmion lattice	185
8.7	Conclusions	185
Appendices		189
8.A	Stiffness-constant and spiralization-tensor definitions	189
8.A.1	Spin spiral	189
8.A.2	Spin-spiral energy	189
8.A.3	Taylor expansion of the spin-spiral energy	191
8.A.4	Stiffness and spiralization tensors	192
8.A.5	The ground state	193
8.B	The exponential enveloping and extrapolation method for the ex- change tensor	194
8.B.1	Exchange interaction model	194
8.B.2	Exchange stiffness convergence	194

8.B.3	Exponential enveloping and extrapolation	194
8.B.4	Choosing the exponential factor range	195
8.B.5	Minimum cut-off radius	196
8.B.6	Pseudomorphic 1ML Co/W(110)	197
8.C	Skyrmion topological charge	198
9	Nonreciprocity of spin waves due to the Dzyaloshinskii-Moriya interaction	199
9.1	Introduction	200
9.2	Theoretical framework and model systems	202
9.3	Results	203
9.3.(i)	Nonreciprocal spin-wave spectrum	204
9.3.(ii)	Spin-wave angular momentum and spin-wave handedness	205
9.3.(iii)	External magnetic field and zero-net-magnetization systems	208
9.3.(iv)	Role of spin-polarized/resolved inelastic scattering	209
9.3.(v)	Dzyaloshinskii-Moriya interaction and spin-wave angular momentum	214
9.4	Conclusions	215
Appendices		217
9.A	On the chiral asymmetry of spin waves	217
9.A.1	Spin-wave chirality in ferromagnets	217
9.A.2	Spin waves in a classical approach	218
	Effective field	218
	Equation of motion	219
	Fourier transformation	220
	Eigenvalues: the frequencies	221
	Local spin dynamics	222
9.A.3	Circular components duality	223
10	Conclusions and perspectives	225
	Bibliography	229
	List of Figures	245
	List of Tables	261
	Curriculum vitae	263
