# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Problem statement and challenges . . . . .	2
1.2	Objectives . . . . .	4
1.3	Outline . . . . .	5
<b>2</b>	<b>Background</b>	<b>9</b>
2.1	The human brain . . . . .	9
2.1.1	Imaging modalities . . . . .	11
2.1.2	Cytoarchitecture . . . . .	13
2.1.3	Observer-independent method for brain area mapping . . . . .	15
2.1.4	Image registration . . . . .	16
2.1.5	JuBrain: Probabilistic atlas of brain areas . . . . .	18
2.2	Deep learning for image analysis . . . . .	19
2.2.1	Building blocks of artificial neural networks . . . . .	20
2.2.2	Convolutional neural network architectures . . . . .	25
2.2.3	Semantic segmentation architectures . . . . .	26
2.2.4	Training deep neural networks . . . . .	29
2.2.5	Evaluating the training process in deep neural networks . . . . .	31
2.2.6	Transfer learning . . . . .	35
2.3	Datasets . . . . .	36
2.3.1	Labeled dataset for brain area segmentation . . . . .	37
2.3.2	Projection of JuBrain probabilistic maps to the labeled dataset . . . . .	38
2.3.3	Unlabeled dataset for unsupervised feature learning . . . . .	39
2.3.4	Gray/white matter segmentation of labeled dataset . . . . .	40
<b>3</b>	<b>Related work</b>	<b>43</b>
3.1	Analysis of the laminar structure of the cortex . . . . .	43
3.2	Brain area parcellation in magnetic resonance imaging . . . . .	44
3.2.1	Atlas registration approaches . . . . .	44
3.2.2	Deep learning approaches . . . . .	46
3.3	Automatic analysis of high-resolution histological images . . . . .	48
3.3.1	Patch-based approaches . . . . .	49
3.3.2	Stain-normalization methods . . . . .	50

## Contents

3.3.3	Texture representations . . . . .	52
3.4	Deep learning with limited training data . . . . .	52
3.4.1	Data augmentation: Generate more training data . . . . .	53
3.4.2	Transfer learning: Leverage already trained models . . . . .	54
3.4.3	Unsupervised pre-training: Leverage unlabeled data . . . . .	55
<b>4</b>	<b>Area classification using profile features</b>	<b>59</b>
4.1	Automatic profile extraction workflow . . . . .	60
4.1.1	Streamlines: Traverses of the cortex . . . . .	60
4.1.2	Profiles: Gray values beneath the streamlines . . . . .	61
4.2	1D convolutional neural network for block-wise profile classification . . . . .	63
4.2.1	Network architecture . . . . .	64
4.2.2	Training procedure . . . . .	64
4.3	Results . . . . .	65
4.3.1	Performance on the area classification task . . . . .	65
4.3.2	Saliency analysis: What did the model learn? . . . . .	67
4.4	Discussion . . . . .	68
<b>5</b>	<b>Area segmentation with two-stream convolutional neural network</b>	<b>71</b>
5.1	Two-stream U-Net for area segmentation . . . . .	72
5.1.1	Basic network architecture . . . . .	72
5.1.2	Exploiting probabilistic atlas information . . . . .	74
5.2	Data preparation and training . . . . .	76
5.2.1	Divide complex background class . . . . .	76
5.2.2	Training dataset generation . . . . .	77
5.2.3	Data augmentation . . . . .	77
5.2.4	Training and evaluation . . . . .	79
5.2.5	Computational challenges during training . . . . .	80
5.3	Results . . . . .	81
5.3.1	Effect of data augmentation . . . . .	82
5.3.2	Influence of atlas prior . . . . .	83
5.3.3	Feature map analysis: What did the model learn? . . . . .	86
5.3.4	Comparison with profile classification model . . . . .	88
5.4	Discussion . . . . .	89
<b>6</b>	<b>Self-supervised brain area analysis</b>	<b>91</b>
6.1	Neural network model for the self-supervised task . . . . .	92
6.1.1	Distance and location regression task . . . . .	92
6.1.2	Siamese network architecture . . . . .	94

6.2	Self-supervised training and fine-tuning . . . . .	95
6.2.1	Data sampling . . . . .	95
6.2.2	Self-supervised training . . . . .	96
6.2.3	Fine-tuning for area segmentation . . . . .	97
6.3	Improving supervised segmentation by pre-training . . . . .	98
6.3.1	Evaluation of model components . . . . .	98
6.3.2	Comparison to training from scratch . . . . .	101
6.3.3	Training on multiple brain volumes . . . . .	103
6.4	Analysis of the self-supervised model . . . . .	105
6.4.1	Inter-hemisphere generalizability . . . . .	106
6.4.2	Relationship between learned features and cortical properties .	107
6.4.3	3D analysis of feature vectors . . . . .	110
6.4.4	2D analysis of feature vectors . . . . .	112
6.5	Conclusion . . . . .	115
<b>7</b>	<b>Application: Deep label propagation between sections</b>	<b>117</b>
7.1	Deep label propagation workflow . . . . .	118
7.2	Multi-scale model for label propagation . . . . .	119
7.2.1	Multi-scale network architecture . . . . .	120
7.2.2	Dataset generation . . . . .	121
7.2.3	Training procedure . . . . .	122
7.3	Results . . . . .	123
7.3.1	Influence of context input . . . . .	123
7.3.2	Spatial coherence of predictions . . . . .	127
7.4	High-resolution 3D reconstruction of brain areas . . . . .	128
7.4.1	Generation of reconstruction . . . . .	128
7.4.2	Results: hOc1 and hOc2 meshes . . . . .	129
7.5	Discussion . . . . .	130
<b>8</b>	<b>Conclusion</b>	<b>133</b>
8.1	Summary . . . . .	133
8.2	Contributions . . . . .	134
8.3	Limitations and general recommendations . . . . .	136
8.4	Future work . . . . .	138
<b>Appendix</b>		<b>141</b>
A.1	Author contribution to publications presented in this thesis . . . . .	141
A.2	Author contribution to collaborative work presented in this thesis . .	142
<b>Glossary</b>		<b>145</b>
	Abbreviations . . . . .	145
