CONTENT

I. Executive summary	7
-----------------------------	----------

II. Foreword	11
---------------------	-----------

III. Rationale	13
1. Neutron provision	13
1.1 Reactor based fission neutron sources	14
1.2 Spallation neutron sources	15
1.3 Accelerator driven neutron sources	15
2. Neutron landscape	16
3. Baseline design	18
3.1 Comparison to existing sources	19

IV. Science case	21
1. Chemistry	24
2. Geoscience	25
3. Environment	26
4. Engineering	27
5. Information and quantum technologies	28
6. Nanotechnology	29
7. Energy technology	30
8. Cultural heritage	31
9. Soft matter, biomaterials and health	31
10. Radiation safety	32
11. Neutron methods	35
11.1 Elastic scattering	35
11.2 Inelastic scattering	36
11.3 Analytics	38
11.4 Imaging	40
11.5 Irradiation	41
11.6 Isotope production	42
11.7 Particle physics	43
11.8 Nuclear spectroscopy	44
11.9 Neutron interferometry	45

V. Conceptual design	47
1. Neutron production	48
2. Accelerator	49
2.1 Top level requirements	49
2.2 Choice of technology	51
2.3 Design philosophy	54
2.4 Proton source	56
2.5 Low energy beam transport and chopper	57
2.6 Radio frequency quadrupoles	59
2.7 Medium energy beam transport	62
2.8 Drift tube linac	62
2.9 RF system	64
3. Multiplexer	66
3.1 Requirements	67
3.2 Layout	68
3.3 Beam dynamics	70
3.4 Magnet design	72
4. Proton beam transport	74
4.1 Proton beam dump	77
5. Target	78
5.1 Material selection	79
5.2 Neutron spectrum	80
5.3 Basic target design	80
6. Moderator-reflector assembly	87
6.1 Thermal moderator	88
6.2 Cold moderators	92
7. Reflector	96
8. Shielding	97
9. Target station design	101
9.1 Cooling	102
9.2 Neutron beam extraction	104
9.3 Target handling	105

VI. Instrumentation	107
1. Imaging	109
1.1 Cold neutron imaging	109
1.2 Thermal neutron imaging beamline	110
1.3 Diffractive neutron imaging beamline	112
1.4 Epithermal and high energy neutron imaging beamline	113

2. Diffraction	113
2.1 Thermal powder diffractometer with flexible and high resolution	114
2.2 Diffractometer for nanoscaled and disordered materials	115
2.3 Single crystal and powder magnetism diffractometer	117
2.4 Macromolecular diffractometer	118
2.5 Engineering diffractometer	120
3. SANS	121
3.1 High resolution SANS	121
3.2 GISANS	123
4. Reflectometry	124
4.1 Specular reflectometer with SELENE optics	124
4.2 Reflectometer with off-specular scattering	126
5. Spectroscopy	127
5.1 Cold chopper spectrometer	127
5.2 High energy chopper spectrometer	128
5.3 XTOF spectrometer with high $\bar{Q}$ -resolution	129
5.4 Vibrational spectrometer	131
5.5 Backscattering spectrometer	131
5.6 Neutron spin echo	132
6. Analytics	134
6.1 Prompt gamma neutron activation analysis	134
6.2 Neutron depth profiling	136

VII. Operation 139

1. Regular operation	139
2. Control systems	139
2.1 HBS machine control system	140
3. Instrument control system	142
3.1 Requirements and functionality	142
3.2 Architecture and implementation	143
4. Risk management and improvement	145

VIII. Safety 147

1. Non-radiological safety	147
2. Radiological safety	147
3. Handling of activated material	149

IX. Infrastructure	155
1. Building requirements	156
2. Energy supply and cooling	156

X. Commissioning, decommissioning	159
1. Commissioning	159
2. Decommissioning	159
3. Waste management	160

XI. Investments, costing & timeline	161
--	-----

XII. Cooperation and delineation	165
---	-----

Acknowledgement	167
------------------------	-----

A. Appendices	169
1. Production of secondary products	169
2. Beam brilliance at HBS	172
3. Brilliance calculation	173

Allgemeines / General
Band / Volume 8
