Table of Contents

Abstract.....	i
Kurzfassung.....	III
List of Figures	v
List of Tables	xi
Abbreviations and symbols	xv
1 Motivation	1
1.1 CO ₂ emissions and reduction measures	1
1.2 Carbon capture – an indispensable solution to CO ₂ mitigation	2
1.3 Objective and structure	3
2 Literature review and related work	5
2.1 An overview of decarbonization approaches	5
2.2 The MEA-based chemical absorption technology	7
2.3 Literature review of the application of the MEA-based chemical absorption technology	
16	
2.4 Gas permeation membrane technology	19
2.5 Literature review of the application of the gas permeation membrane technology.....	25
2.6 Hybrid carbon capture system	27
2.7 Review of the costing method for carbon capture	29
2.8 Discussion	31
2.9 Summary	33
3 Modeling of carbon capture systems and costing method	35
3.1 Modeling of MEA-based chemical absorption system	35
3.2 Modeling of membrane-based separation systems	43
3.3 Modeling of hybrid capture systems	46
3.4 Modeling of CO ₂ compression train.....	49

3.5	General costing method	50
3.6	Discussion	56
3.7	Summary	60
4	Retrofitting of carbon capture systems into a coal-fired power plant.....	63
4.1	Model of the reference power plant.....	64
4.2	Parametric study for the MEA system	69
4.3	Integration of the MEA system into the water-steam cycle	77
4.4	Parametric study for membrane-based separation system.....	88
4.5	Technical evaluation of the studied carbon capture systems.....	92
4.6	Pinch analysis and waste heat integration	100
4.7	Economic evaluation	108
4.8	Discussion	121
4.9	Summary	124
5	Deployment of carbon capture systems in a greenfield iron and steel plant	127
5.1	Reference integrated iron and steel plant.....	127
5.2	Design basis for carbon capture.....	133
5.3	Technical analysis for carbon capture	137
5.4	Economic analysis	143
5.5	Discussion	151
5.6	Summary	155
6	Summary	157
6.1	Scope and objectives.....	157
6.2	Approach	157
6.3	Results of carbon capture deployment.....	158
6.4	Conclusions and contributions	161
	Appendix A Definition.....	163

A.1 Definition of CO ₂ loading	163
A.2 Definition of CO ₂ capture rate.....	163
A.3 Definition of m value for amine solution.....	163
Appendix B MEA model in Aspen Plus®	165
B.1 MEA scrubbing model	165
B.2 Other initial specifications of the MEA model.....	166
B.3 Detailed information on the MEA model	166
B.4 Convergence sequence	167
B.5 Calculation of MEA regeneration thermal energy	168
B.6 CO ₂ solubility.....	169
B.7 CO ₂ heat capacity	170
Appendix C Cascaded membrane system	171
C.1 Model of the cascaded membrane system in Aspen Plus®	171
C.2 Detailed information on the cascaded membrane model.....	172
Appendix D Hybrid model design	173
D.1 Hybrid model D1	173
D.2 Hybrid model D2	174
Appendix E Power plant.....	175
E.1 Information of hard coal.....	175
E.2 Characteristics of the steam generator	176
E.3 Characteristics of the combustion chamber.....	177
E.4 Characteristics of the steam turbine	178
E.5 Integration of the MEA system into the power plant in EBSILON®	179
Appendix F Reference iron & steel plant	181
F.1 Raw materials and products	181
F.2 Characteristic of the available natural gas	182

Appendix G HEN optimization for carbon capture in the power plant	183
G.1 Pinch analysis for MEA-CO ₂ compression-LP preheaters	183
G.2 Pinch analysis for membrane-CO ₂ compression-LP preheaters.....	184
G.3 Pinch analysis for Hybrid D1-CO ₂ compression-LP preheaters	185
G.4 Pinch analysis for Hybrid D2-CO ₂ compression-LP preheaters	186
G.5 Steam extraction for LP preheaters.....	187
G.6 Optimized HEN for the standalone cascaded membrane system.....	188
G.7 HEN for cascaded membrane-CO ₂ compression-feed water	189
G.8 HEN for MEA-CO ₂ compression-feed water.....	190
G.9 HEN for Hybrid D1 – CO ₂ compression – feed water	191
G.10 HEN for Hybrid D2 – CO ₂ compression – feed water	192
Appendix H Costing method.....	193
H.1 Sizing of separation vessels.....	193
H.2 Difference between CO ₂ captured and avoided.....	194
H.3 Classification of cost estimate	195
Appendix I Economic analysis for carbon capture in the reference power plant	197
I.1 Breakdown of CAPEX & OPEX	197
I.2 Material, pressure and temperature factors	205
Appendix J Economic analysis for carbon capture in the reference iron & steel plant	207
J.1 Geometric results of the capture systems	207
J.2 Overview of the equipment costs	207
J.3 CAPEX	211
J.4 OPEX	215
References	219
