Band / Volume 68

ISSN 1866-1777

ISBN 978-3-95806-555-0

Table of Contents

Abbreviations	i
Abstract	iv
Contents	viii
Introduction	1
1 Fundamentals	5
1.1 The nervous system and its neurons	6
1.1.1 The Neuron - Structure and Function	7
1.1.2 Development of Cortical Neurons	13
1.1.3 Network Activity	15
1.2 MEAs and Electrophysiology	21
1.2.1 Whole-Cell Patch Clamp	21
1.2.2 Microelectrode Arrays	23
1.3 Optogenetics	25
1.3.1 Calcium Sensing and Image Processing	25
1.3.2 Optogenetic actuators	28
1.4 Patterning Neuronal Networks	30
1.4.1 Microcontact Printing	32
2 Materials and Methods	33
2.1 Microcontact Printing	34
2.1.1 Stamp Fabrication	34
2.1.2 Chemical Vapor Deposition of GLYMO	35
2.1.3 Microcontact Printing Process	36
2.2 Cell Culture	37
2.2.1 HL-1 Cells	37
2.2.2 Preparation of Primary Cortical Cells	37
2.2.3 Homogeneous Coating of Substrates	38

2.2.4	Transduction	39
2.2.5	Live/Dead Stainings	39
2.2.6	Immunocytochemistry	40
2.3	Microelectrode Arrays and Gold Macro Electrodes	41
2.3.1	Gold Macro Electrodes	41
2.3.2	Fabrication	42
2.3.3	Cell Recordings	44
2.4	Optical Recordings and Stimulations	47
2.4.1	Microscopy and Amplifier Setups	47
2.4.2	Calcium imaging	50
2.4.3	Combined calcium imaging and optical stimulation	52
2.4.4	Patch clamp and optical stimulation	55
2.5	Data Analysis of Neuronal Network Recordings	58
2.5.1	Peak Detection in Calcium Traces	58
2.5.2	Synchronous Network Event Detection	59
2.5.3	Edit Distance	61
2.5.4	Cross-Correlations	61
2.5.5	Generalized Transfer Entropy	62
2.5.6	Graph Theoretical Model	63
2.6	Statistical Comparisons	67
3	Observing Patterned Neurons	69
3.1	Improvements in Microcontact Printing	70
3.1.1	Polystyrene and GLYMO Improve Patterning	70
3.1.2	Population Patterns Are Difficult to Record via MEAs	76
3.2	Thiols on Gold Electrodes	80
3.2.1	Thiols Improve Adhesion to Large Gold Surfaces	80
3.2.2	Thiols do not Clearly Improve Recording Quality	81
3.3	Transparent, Holey MEAs for Electrophysiology	84
3.3.1	Plasmonically-Enhanced Transparency of Holey Gold and MEA Electrodes	84
3.3.2	Electrophysiological Recordings with Holey MEAs	86
3.4	Conclusions and Outlook	89
4	Small populations: from linear to circular activity	91
4.1	Pattern Designs	92

4.2	Large Triangles Propagate Electrical Activity	94
4.3	neuroCapTiH - Spontaneous activity dynamics	98
4.3.1	Establishing Calcium Imaging and Subsequent Analysis	98
4.3.2	Spontaneous SNEs are not Trapped in Arcs	100
4.3.3	APs Propagate Mostly Forward for up to 11 Triangles	101
4.4	Interlude - Establishing an All Optical Recording and Stimulation System	105
4.5	neuroCapTiH - Evoked activity dynamics	110
4.5.1	The Spatial Structure of SNEs Varies Between Conditions	113
4.5.2	Different network stimulation elicits different types of SNEs	115
4.5.3	Evoked SNEs Travel Mostly Forward for up to 11 Triangles	117
4.6	Conclusions and Outlook	122
5	Large populations: investigating network synchronicity	125
5.1	Pattern Design	126
5.2	Stimulus Location and Synchronicity Impact Neuronal Response	127
5.2.1	Synchronous Stimulation Increases Response Reliability	128
5.2.2	Functional Separation and Triangle Directionality	130
5.3	SNEs Are Influenced by Stimulus Location and Type	132
5.3.1	Synchronized Population Activity Increases SNE Rate and Decreases SNE Duration	132
5.3.2	Intra-SNE Event Patterns Differ Between All Conditions	135
5.4	Functional Network Connectivity Is Different Between Stimulations	139
5.4.1	Average Clustering is Altered in Functional Networks	140
5.4.2	Intra-Triangle Connectivity is Increased During Stimulation	143
5.4.3	Conserved Special Neuron States Indicate Distinct Evoked Communities . .	143
5.5	Conclusions and Outlook	153
	Conclusions	157
	References	159
	Own Publications	169
	Acknowledgments	170
	A Additional Figures and Tables	171
