# Contents

<b>1 Motivation</b>	<b>1</b>
<b>2 Introduction to stratospheric chemistry and dynamics</b>	<b>5</b>
2.1 Basics of stratospheric dynamics . . . . .	5
2.2 The lowermost stratosphere . . . . .	7
2.2.1 Trace gas correlations . . . . .	8
2.2.2 Water vapour and ozone in the lowermost stratosphere . . . . .	9
2.3 Stratospheric ozone chemistry . . . . .	11
2.3.1 Ozone chemistry in the lowermost stratosphere . . . . .	13
2.3.2 Polar ozone loss cycles . . . . .	14
2.4 Climate change and sulfate geoengineering . . . . .	20
2.4.1 Energy balance of the Earth . . . . .	21
2.4.2 Concept of sulfate geoengineering . . . . .	23
2.4.3 Impact of global warming on the stratosphere . . . . .	25
2.4.4 Impact of geoengineering on the stratosphere . . . . .	27
<b>3 Numerical models</b>	<b>31</b>
3.1 Introduction to numerical atmospheric models . . . . .	31
3.2 Chemical Lagrangian Model of the Stratosphere . . . . .	33
3.3 Geoengineering Large Ensemble Simulations . . . . .	35
<b>4 Chlorine activation and ozone loss in the mid-latitude lowermost stratosphere</b>	<b>37</b>
4.1 Model setup . . . . .	38
4.1.1 Measurements . . . . .	38
4.1.2 Trajectory calculations . . . . .	39
4.1.3 Chemical initialization . . . . .	43
4.2 Mechanism of mid-latitude ozone chemistry . . . . .	47
4.2.1 Ozone formation at low water vapour mixing ratios . . . . .	50

4.2.2	Ozone loss at high water vapour mixing ratios . . . . .	51
4.3	Analysis of chlorine activation . . . . .	60
4.3.1	Sensitivity of the water vapour threshold . . . . .	60
4.3.2	Explanation of the water vapour threshold . . . . .	61
4.3.3	Temperature dependence . . . . .	66
4.4	Case studies . . . . .	69
4.4.1	Case based on observations . . . . .	69
4.4.2	Case of high Cl <sub>y</sub> . . . . .	71
4.4.3	Reduced Br <sub>y</sub> Case . . . . .	72
4.4.4	Extended time period . . . . .	73
4.5	Discussion of the results . . . . .	75
4.6	Summary . . . . .	80
<b>5</b>	<b>Potential for future mid-latitude ozone loss in the lowermost stratosphere</b>	<b>83</b>
5.1	Setup of Simulations . . . . .	84
5.1.1	GLENS data selection . . . . .	85
5.1.2	CLaMS simulations . . . . .	88
5.2	Analysing the GLENS mixing layer above central North America . . . . .	90
5.2.1	Comparing the GLENS mixing layer today with measurements .	90
5.2.2	Change in the chemical composition of the mixing layer . . . . .	94
5.3	Comparison of GLENS results with chlorine activation thresholds . . . . .	98
5.3.1	Analysis of chlorine activation thresholds . . . . .	98
5.3.2	Likelihood for ozone destruction today and in future . . . . .	103
5.3.3	Impact of heterogeneous chlorine activation on ozone in the lowermost stratosphere . . . . .	107
5.3.4	Relevance of heterogeneous chlorine activation in the mixing layer for the mid-latitude ozone column . . . . .	112
5.3.5	Likelihood of heterogeneous chlorine activation and its impact on ozone for low temperatures . . . . .	114
5.4	Discussion . . . . .	117
5.5	Summary . . . . .	120
<b>6</b>	<b>Conclusions</b>	<b>125</b>

<b>Appendix</b>	<b>155</b>
<b>A Chemical species and reactions in CLaMS</b>	<b>157</b>
<b>B Tracer-Tracer correlations</b>	<b>165</b>
<b>C Maintenance of activated chlorine</b>	<b>167</b>
<b>D MACPEX case</b>	<b>171</b>
D.1 Model Setup . . . . .	171
D.2 Results of MACPEX simulations . . . . .	172
D.2.1 MACPEX Trajectory . . . . .	173
D.2.2 Sensitivity studies . . . . .	175
<b>E Comparison of the GLENS mixing layer with START08 measurements</b>	<b>177</b>
<b>F Abbreviations and Glossary</b>	<b>181</b>
