Table of Contents

1 Introduction	1
2 Fundamentals and Theory	5
2.1 Aptamers	5
2.1.1 SELEX aptamer selection process	5
2.2 Electrochemical Aptamer-based Biosensor	7
2.2.1 Aptasensor characteristics	7
2.2.2 Performance factors	8
2.2.3 Immobilization methods	10
2.3 Electrochemistry	11
2.3.1 Electrode/electrolyte interface	11
2.3.2 Electrochemical cell	14
2.3.3 Electrochemical Impedance Spectroscopy	17
2.3.4 Voltammetry	20
2.4 Graphene-based field-effect transistor (G-FET) principle	23
2.5 Physicochemical characterization methods	27
2.5.1 Quartz crystal microbalance with dissipation	27
2.5.2 X-ray photoelectron spectroscopy	29
2.5.3 Contact angle	30
2.5.4 Atomic force microscopy	32
3 Materials, equipments, and methods	35
3.1 Materials	35
3.2 Electrode preparation	36
3.2.1 Gold rod electrode cleaning	36
3.2.2 Flexible microelectrode arrays fabrication and cleaning	37
3.2.3 Preparation of GO flakes and fabrication of rGO-FET devices	39
3.3 Aptasensor biofunctionalization and target detection	41
3.3.1 Stepwise preparation of the aptamer/PEG receptor layer for GRE and flex-MEA... ..	41
3.3.2 <i>In situ</i> and <i>ex situ</i> PfLDH detections in human serum by fabricated aptasensor on gold rod electrode	42
3.3.3 flex-MEA multi-target aptasensor detection in spiked analyte blood samples and <i>Plasmodium falciparum</i> parasitized blood samples	42
3.3.4 Biofunctionalization of rGO-FETs with aptamer receptor layer and PfLDH detection in buffer and human serum, and control experiments with human LDH and PSA aptamer..	43
3.4 Electrochemical measurements	44
3.4.1 Electrochemical impedance spectroscopy	44
3.4.2 Differential pulse voltammetry	45
3.4.3 Cyclic voltammetry	45
3.4.4 Chronocoulometry for receptor density calculation	46
3.5 Field-effect behavior measurements of rGO-FET aptasensor	47
3.6 Physicochemical characterization methods	48
3.6.1 QCM-D measurements	48
3.6.2 XPS analysis	49

3.6.3	Contact angle.....	49
3.6.4	AFM analysis	50
4	Polyethylene glycol time-dependent blocking modulates the performance of an electrochemical malaria aptasensor	51
4.1	Reduction of non-specific adsorption	54
4.2	Physicochemical characterization of the stepwise aptasensor fabrication with different PEG blocking times	55
4.2.1	Monitoring stepwise molecule adsorption by QCM-D	55
4.2.2	XPS investigations	58
4.2.3	Contact angle investigations	59
4.2.4	AFM investigations.....	60
4.3	PEG blocking time optimization.....	63
4.4	Concentration dependence of sensor signal	64
4.5	Sensor selectivity	67
5	Flexible multielectrode array aptasensor for electrochemical multi-target detection in malaria parasite blood samples	70
5.1	flex-MEA mechanical characterization demonstrates its robustness.....	72
5.2	flex-MEA multi-target aptasensor characterization for the detection of spiked analytes in blood	74
5.3	Measurement of <i>Plasmodium falciparum</i> parasitemia in blood samples by flex-MEA multi-target aptasensor.....	85
5.4	flex-MEA multi-target aptasensor cost analysis	90
6	Ultrasensitive graphene-based field-effect transistor aptasensor for malaria detection in human serum	92
6.1	Field-effect characterization of rGO-FET devices in liquid gate configuration.....	93
6.2	rGO-FET aptasensor performance for PfLDH detection	96
6.3	PfLDH detection in human serum	104
7	Conclusions and Outlook	106
	References	109
	Acknowledgments	123
	Appendix A: Nomenclature	124
	Appendix B: Supporting images and table for results and discussion	126
	Author's List of Publications	133
	Author's List of Patents	135
