Modeling and Diagnosis of the Stratospheric Circulation

Edward Joseph Charlesworth

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 563

ISSN 1866-1793

ISBN 978-3-95806-605-2

Contents

1. Introduction	2
2. Background	5
2.1. Radiation	5
2.2. Stratospheric Transport	7
2.2.1. Early Theory Development	7
2.2.2. The Residual Circulation	9
2.2.3. A Comprehensive Circulation	11
2.2.4. Stratospheric Polar Vortices	12
2.3. Chemicals and Tracers	13
2.3.1. Water Vapor	13
2.3.2. Ozone	14
2.3.2.1. Chapman Chemistry	14
2.3.2.2. Other Destruction	15
2.3.2.3. Effect of Transport	16
2.3.3. Other Chemicals	18
2.3.4. Age of Air	19
2.4. Expected Trends	20
2.4.1. Temperature	20
2.4.2. Water Vapor	20
2.4.3. Ozone	20
2.4.4. Residual Circulation	21
2.5. The Development of Stratospheric Transport Models	22
3. Modeling Stratospheric Transport	31
3.1. Introduction	31
3.2. EMAC-CLaMS and EMAC-FFSL	32
3.2.1. Models	32
3.2.2. Calculation of Age Spectra in a Model	33
3.2.3. Forward Tracers	34
3.2.4. The EMAC-CLaMS Lower and Upper Boundary	35
3.3. Differences in the Zonal Mean State: Global Perspective	36
3.3.1. Mean age of air	36
3.3.2. Chemical Composition	38
3.3.3. Inter-annual variability	39
3.3.4. Age spectrum shape	40

3.4.	Differences in the representation of transport processes	40
3.4.1.	Tropical and mid-latitude stratosphere	41
3.4.2.	Lowermost Stratosphere	41
3.5.	Discussion	43
3.6.	Conclusions	45
4.	Radiative Effects of Stratospheric Water Vapor	58
4.1.	Radiative Coupling	58
4.2.	Experiment Design	59
4.3.	Water Differences	60
4.3.1.	Water Vapor Distribution Differences in Uncoupled Simulation .	60
4.4.	Temperature Differences	64
4.5.	Recent Literature Context	66
4.6.	Conclusions	68
5.	Quantifying Brewer-Dobson Circulation Variability from Ozone Observations	71
5.1.	Current Knowledge	71
5.2.	Effective Upwelling	73
5.3.	Validity of Proxy Assumption	74
5.4.	Upwelling Seasonal Cycle	75
5.5.	Timeseries	75
5.6.	Correlations with Reanalyses	76
5.7.	Limitations of the Method	77
5.8.	Validity at other levels	77
5.9.	Application of SHADOZ data	78
5.10.	Calculation of Photolysis Rates	79
5.11.	Simple Calculation	80
5.12.	Discussion	81
5.13.	Conclusions	82
6.	A Closing Word	88
Bibliography		91
A.	Photolysis of Diatomic Oxygen	A 1
