# Contents

<b>Declaration of Authorship</b>	<b>iii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Outline of the Thesis . . . . .	3
<b>2 Spin-wave theory</b>	<b>5</b>
2.1 Origin of magnetism . . . . .	5
2.2 Orbital magnetism . . . . .	6
6subsection.17	
2.2.2 Topological orbital magnetism . . . . .	7
2.3 Origin of magnetic interactions . . . . .	8
2.3.1 Magnetic exchange interaction . . . . .	9
2.3.2 Zeeman coupling . . . . .	11
2.3.3 Magnetic interactions caused by spin-orbit coupling . . . . .	11
Magnetocrystalline anisotropy . . . . .	11
Dzyaloshinskii-Moriya interaction . . . . .	12
Kitaev interaction . . . . .	12
2.3.4 Higher-order spin interactions . . . . .	13
2.3.5 Generalized Heisenberg Hamiltonian . . . . .	13
2.3.6 Monte Carlo method . . . . .	14
2.3.7 Introduction to spin wave . . . . .	15
2.4 Quantum theory of spin waves . . . . .	17
2.4.1 Magnon dispersion with quantum theory method . . . . .	17
Ground state of the ferromagnetic Heisenberg Hamiltonian . . . . .	17
Holstein-Primakoff transformation . . . . .	18
Magnon dispersion . . . . .	20
Low T spontaneous magnetization . . . . .	21
2.4.2 Spin waves with generalized Heisenberg Hamiltonian	22
Spin waves with ferromagnetic ground state . . . . .	22
Spin waves with non-collinear ground state . . . . .	24
Spin waves with higher-order interactions . . . . .	25
2.5 Magnon-phonon coupling . . . . .	25
2.6 Summary . . . . .	25
<b>3 The parametrization of effective spin Hamiltonian</b>	<b>27</b>
3.1 The parametrization of effective spin Hamiltonian through fitting to experimental data . . . . .	27
3.2 The parametrization of effective spin Hamiltonian based on the first-principles calculation . . . . .	28

3.2.1	The Hamiltonian of many-body systems . . . . .	28
3.2.2	Born-Oppenheimer approximation . . . . .	28
3.2.3	Hartree-Fock Approximation . . . . .	29
	Hartree equation . . . . .	29
	Hartree-Fock Equation . . . . .	30
3.2.4	Density Functional Theory . . . . .	30
	Hohenberg-Kohn Theorems . . . . .	31
	Kohn-Sham equation . . . . .	31
	Exchange-correlation energy . . . . .	33
	Choice of Basis Sets . . . . .	34
3.2.5	LDA(GGA)+U . . . . .	34
3.2.6	The parametrization of the generalized Heisenberg model . . . . .	35
	Exchange interaction . . . . .	35
	Dzyaloshinskii-Moriya interaction . . . . .	36
	Single-ion anisotropy energy . . . . .	37
	Zeeman energy . . . . .	37
3.3	Conclusion . . . . .	37
<b>4</b>	<b>Magnonic topology and transport</b>	<b>39</b>
4.1	The Berry Phase and Berry curvature . . . . .	39
4.2	The Berry curvature in magnonic systems . . . . .	41
4.3	Weyl Semimetal in magnonic systems . . . . .	42
4.4	Magnonic transport based on the semiclassical theory . . . . .	44
4.5	Summary . . . . .	49
<b>5</b>	<b>Two-dimensional metal-organic frameworks with Shastry-Sutherland lattice</b>	<b>51</b>
5.1	Introduction of two-dimensional metal-organic frameworks with Shastry-Sutherland lattice . . . . .	51
5.2	Stability and ground state in TM–PBP . . . . .	53
5.2.1	Bonding Energy . . . . .	53
5.2.2	Exchange interaction and 2D Ising model . . . . .	53
5.2.3	Curie temperature of Mn-PBP . . . . .	55
5.3	The Hubbard $U$ and substrate effect on the magnetic properties . . . . .	57
5.3.1	The influence of Hubbard $U$ . . . . .	57
5.3.2	Substrate effect on Mn-PBP . . . . .	57
5.4	Bonding analysis and electronic properties . . . . .	58
5.5	The influence of strain and chemical doping for Mn-PBP . . . . .	62
5.6	Magnonic properties of Mn-PBP . . . . .	63
5.7	Discussion . . . . .	66
<b>6</b>	<b>Magnonic Weyl states in <math>\text{Cu}_2\text{OSeO}_3</math></b>	<b>67</b>
6.1	Introduction of $\text{Cu}_2\text{OSeO}_3$ . . . . .	67
6.2	Magnon dispersion and model establishment of $\text{Cu}_2\text{OSeO}_3$ . . . . .	69
6.2.1	Experimental result and effective Hamiltonian . . . . .	69
6.2.2	The DMI vector . . . . .	71
	DMI vector with <i>ab initio</i> parameters . . . . .	71

DMI vector with fitting . . . . .	73
6.2.3 Magnon dispersion from the LSWT . . . . .	75
6.3 Topological properties of Cu <sub>2</sub> OSeO <sub>3</sub> . . . . .	76
6.3.1 Magnonic Weyl states . . . . .	76
6.3.2 Surface states . . . . .	77
6.4 Thermal Hall conductivity . . . . .	78
6.5 Effect of the DMI on Weyl points and thermal Hall conductivity . . . . .	81
6.5.1 Effect of DMI on Weyl points position . . . . .	81
6.5.2 Effect of DMI on thermal Hall conductivity . . . . .	82
6.6 Discussion . . . . .	83
<b>7 The interplay of Kitaev interactions and Dzyaloshinskii-Moriya-interactions</b>	<b>85</b>
7.1 The Kitaev interaction in magnets . . . . .	85
7.2 Model establishment . . . . .	86
7.3 The magnonic properties in Heisenberg-Kitaev model . . . . .	87
7.4 The Heisenberg-Kitaev model with the influence of DMI . . . . .	91
7.5 The effect of a magnetic field on the Heisenberg-Kitaev-DMI model . . . . .	92
7.6 Summary . . . . .	96
7.7 Application in CrGeTe <sub>3</sub> and CrSiTe <sub>3</sub> . . . . .	97
7.7.1 Introduction of CrGeTe <sub>3</sub> and CrSiTe <sub>3</sub> . . . . .	98
7.7.2 The parameterization of effective spin Hamiltonian in CrXTe <sub>3</sub> (X=Si, Ge) . . . . .	99
7.7.3 Topological properties of CrXTe <sub>3</sub> (X=Si, Ge) . . . . .	103
7.8 Discussion . . . . .	104
<b>8 Imprinting and driving electronic orbital magnetism using magnons</b>	<b>107</b>
8.1 Electronic topological orbital magnetism . . . . .	108
8.2 Magnonic excitations in ferromagnetic kagome lattice . . . . .	110
8.3 Imprinting topological orbital magnetism by magnons . . . . .	112
8.4 Driving orbital currents by magnons . . . . .	116
8.4.1 Orbital Nernst effect of magnons . . . . .	116
8.4.2 Comparison of the orbital Nernst effect and magnon Nernst effect . . . . .	117
8.5 Discussion . . . . .	120
<b>9 Magnon-driven orbitronics in non-collinear systems</b>	<b>123</b>
9.1 Magnon-driven orbitronics in antiferromagnetic kagome lattice	123
9.1.1 Establishing the model . . . . .	123
9.1.2 The canting angle $\eta$ . . . . .	124
9.1.3 Topological phase diagram and orbital Nernst effect . . . . .	127
9.2 Orbital Nernst effect in Mn <sub>3</sub> Ge . . . . .	127
9.2.1 Introduction of Mn <sub>3</sub> Ge . . . . .	127
9.2.2 Establishing the model for Mn <sub>3</sub> Ge . . . . .	128
9.2.3 Orbital Nernst effect in Mn <sub>3</sub> Ge . . . . .	130
9.3 Summary . . . . .	132

<b>10 Summary and future work</b>	<b>133</b>
10.1 Summary . . . . .	133
10.2 Future work . . . . .	134
High throughput computing and spin-wave theory . .	134
Orbital magnetism driven by magnons . . . . .	134
Magnon and phonon coupling . . . . .	134
