Application-Specific Calibration of Condensation Particle Counters under Low Pressure Conditions

Oliver Bernhard Felix Bischof

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 579

ISSN 1866-1793

ISBN 978-3-95806-629-8

Contents

Table of Nomenclature	v
Constants	v
Latin symbols.....	v
Greek symbols.....	vi
Abbreviations.....	vi
Publications	IX
1. Introduction.....	10
2. Background.....	12
2.1 Aerosol and measurement techniques	12
2.2 Condensation Particle Counter.....	17
2.2.1 History of CPCs.....	21
2.2.2 Alcohol-based CPC instruments	22
2.2.3 Water-based CPC instruments.....	23
2.3 CPC calibration	25
2.3.1 CPC calibration guidelines and standards	26
2.3.2 Fundamentals of CPC calibration.....	26
2.4 Traceable CPC calibration.....	28
2.4.1 CPC counting efficiency and smallest size detection limit	29
2.4.2 Concentration linearity	31
2.4.3 Multiple charge effects	32
2.5 Application-specific CPC calibration	34
2.5.1 High-altitude aerosol research	35
2.5.2 Airborne climate research	36
2.5.3 Continuous monitoring of particle number in urban air.....	38
2.5.4 Vehicle exhaust emission certification.....	38
2.5.5 Aircraft emissions testing	41
3. Review of prior research.....	43
3.1 Historic context of low-pressure experiments	43
3.2 Early research in the 1980's and 1990's.....	44
3.3 Work by Hermann in the 2000's	47
3.4 More recent work.....	48
3.5 Summary of previous work	52

4.	Modeling of CPC performance at low-pressure.....	55
4.1	Description of the numerical model	55
4.2	Basic results of the numerical model.....	56
4.3	Modelled counting efficiencies of the CPC 3772-CEN	60
5.	Experimental set-up and characterization.....	65
5.1	Calibration setup	65
5.1.1	Flow control.....	66
5.1.2	Pressure and RH control.....	68
5.2	Instrumentation.....	69
5.2.1	Key characteristics of the CPCs.....	70
5.2.2	Technical modifications of the butanol CPCs	74
5.2.3	Key characteristics of the Aerosol Electrometers	75
5.2.4	Electrometer characterization.....	77
5.3	Choice of calibration aerosols	78
5.3.1	Calibration aerosol for atmospheric background	79
5.3.2	Calibration aerosol for urban air	82
5.3.3	Particle size characterization of the soot generator.....	84
5.4	Boundary conditions and corrections for the data analysis.....	90
5.4.1	Coincidence correction.....	91
5.4.2	Multiple charge correction	92
5.4.3	Data analysis procedure	93
6.	Experimental results for the CPC performance at low pressure.....	96
6.1	CPC response to selected monodisperse sizes	96
6.1.1	Concentration as a function of pressure.....	96
6.1.2	Key results of monodisperse experiments	99
6.2	CPC counting efficiencies for ammonium sulfate (AS)	101
6.2.1	Counting efficiency of the Sky-CPC 5.411 for AS	101
6.2.2	Counting efficiency of the CPC 3772-CEN for AS	102
6.2.3	Linearity of the two CPC models for AS	103
6.3	CPC counting efficiencies for flame soot particles.....	104
6.3.1	Counting efficiency of the Sky-CPC 5.411 for flame soot.....	105
6.3.2	Counting efficiency of the CPC 3772-CEN for flame soot	106
6.3.3	Linearity of the two CPC models for flame soot	107
6.3.4	Impact of the particle material	107
6.4	Humidity dependence of the counting efficiency	109
6.4.1	Effect of humidity on the counting efficiency of the Sky-CPC 5.411	110

6.4.2 Effect of humidity on the counting efficiency of the CPC 3772-CEN	111
6.5 Impact on total PN concentration and basic estimates	113
7. Conclusions and Outlook	118
References	123
