ISBN 978-3-95806-640-3

CONTENTS

1	INTRODUCTION	1
1.1	One neuron and one spike	1
1.2	Multiple neurons and multiple spikes	2
1.3	Neural coding hypotheses	2
1.4	Precise time spike correlations: theory and evidences	4
1.4.1	Pairwise correlation	5
1.4.2	Higher-order synchronization and synchronous spike patterns	6
1.4.3	Spatio-temporal spike patterns	6
1.4.4	Fuzzy patterns	7
1.4.5	Sequences of synchronous patterns	7
1.5	Methods of detection of precisely timed spike correlations	7
1.5.1	Cross-correlation histogram	9
1.5.2	Complexity analysis	9
1.5.3	Unitary events analysis	10
1.5.4	SPADE	10
1.5.5	CAD	11
1.5.6	EDIT	11
1.5.7	SPOTDisCLUST	12
1.5.8	SCCFNAD	12
1.5.9	Seq MNF and PP-seq	13
1.5.10	Bayesian methods	14
1.5.11	ASSET	14
1.5.12	SPIKE-ORDER	15
1.6	Big data sets as a computational challenge for analysis methods	15
1.7	Modeling experimental parallel spike trains with point processes	16
2	3D-SPADE: SIGNIFICANCE EVALUATION OF SPATIO-TEMPORAL PATTERNS OF VARIOUS TEMPORAL EXTENTS	19
2.1	Introduction	20
2.2	SPADE	20
2.2.1	Frequent item set mining	20
2.2.2	Pattern spectrum filtering (2-dimensional)	21
2.2.3	Pattern set reduction	23
2.3	Extension of SPADE's statistical test	24
2.3.1	Motivations for the extension	24
2.3.2	The concept of the 3d-pattern spectrum	24
2.3.3	Comparison and improvements of the new statistical test	25
2.3.4	Validation of 3d-SPADE	29

2.4	Software implementation of SPADE	32
2.4.1	Profiling of computational performance	32
2.4.2	Software and reproducibility	34
2.5	Conclusion and discussion	36
3	ACCELERATION OF SPADE: IMPROVEMENTS IN PATTERN MINING	39
3.1	Introduction	40
3.2	Optimization of FP-Growth	41
3.2.1	Frequent Itemset Mining	41
3.2.2	The FP-Growth algorithm	42
3.2.3	FP-Growth within SPADE	42
3.2.4	Bottlenecks of SPADE and proposed solutions	43
3.2.5	Custom FP-Growth implementation for SPADE	44
3.3	Experimental data used for FP-Growth evaluation	45
3.3.1	Reach-to-grasp experiment	46
3.3.2	Data preparation: R2G data for SPADE	47
3.4	SPADE workflow for data analysis	48
3.4.1	Workflow in the context of FP-Growth evaluation	49
3.5	FP-Growth and its improvements on experimental data	50
3.5.1	Devices used for testing	50
3.5.2	Improvements in time, memory, and energy efficiency	51
3.5.3	Scaling in terms of recording length and number of neurons	55
3.6	Reproducibility and code publication on Elephant	56
3.7	Conclusion and discussion	57
4	REALISTIC MODELING OF EXPERIMENTAL DATA THROUGH POINT PROCESSES	61
4.1	Introduction	62
4.2	Relevant features of experimental data and how to reproduce them	63
4.2.1	Number of parallel processes and recording length	64
4.2.2	Firing rate (stationary and non-stationary)	64
4.2.3	Dead time and refractory period	65
4.2.4	Regularity	65
4.2.5	Pairwise correlation	67
4.2.6	Higher-order correlation	68
4.3	Point process models for generation of artificial data	68
4.3.1	Poisson point process	69
4.3.2	Poisson point process with dead time	69
4.3.3	Gamma point process	70
4.3.4	Generation of non-stationary point processes	71
4.3.5	Surrogates as alternative to point process models	71
4.4	The data sets	71

4.4.1	PPD data set	73
4.4.2	Gamma data set	73
4.4.3	Baseline correlation data set	73
4.4.4	Functional correlation data set	73
4.4.5	Dithered data set	74
4.5	Intermezzo: educational context of ANDA spring school	74
4.6	Statistical characteristics of the data sets	75
4.6.1	Firing rate	75
4.6.2	ISI distribution	76
4.6.3	Spike count	76
4.6.4	Variability of ISIs and spike counts	79
4.6.5	Pairwise correlations	83
4.6.6	Higher-order correlations	84
4.7	Workflow for data generation	86
4.8	Conclusion and discussion	87
5	GENERATING SURROGATES FOR SIGNIFICANCE ESTIMATION OF SPATIO-TEMPORAL SPIKE PATTERNS	91
5.1	Introduction	93
5.2	Formulation of a null-hypothesis through surrogate generation	95
5.3	Spike count reduction in surrogates generated by uniform dithering	98
5.3.1	Uniform dithering	99
5.3.2	Origin of spike count reduction	101
5.3.3	Consequences of spike count reduction	103
5.4	Alternative surrogate techniques	104
5.4.1	Uniform dithering with dead time	106
5.4.2	Joint-ISI dithering	106
5.4.3	ISI dithering	107
5.4.4	Trial shifting	107
5.4.5	Window shuffling	107
5.5	Statistical comparison of surrogate methods	108
5.5.1	Spike Count Reduction in relation to Spike Train Statistics	111
5.5.2	Are surrogates uncorrelated?	115
5.5.3	Coefficient of Variation of ISIs	116
5.5.4	Ratio of moved spikes	116
5.5.5	Rate change in surrogates	117
5.5.6	Summary of the effects of surrogates on the spike-train statistics	118
5.6	SPADE analysis of artificial data across surrogate techniques	119
5.6.1	Simulation of experimental data and SPADE analysis	119
5.6.2	False positive analysis	120
5.7	Application to experimental data	123

5.8	Observations on past analysis and on CoCoNAD	124
5.9	Discussion	126
6	SPATIO-TEMPORAL SPIKE PATTERNS IN MACAQUE MOTOR CORTEX	131
6.1	Introduction	132
6.2	Materials and methods	133
6.2.1	Data	133
6.2.2	SPADE analysis	133
6.2.3	Calculation of pattern specificity to behavior	134
6.3	Results	136
6.3.1	Statistics of detected spatio-temporal spike patterns	136
6.3.2	Pattern specificity to behavior	138
6.3.3	Spatial distribution of patterns on the electrode array	142
6.3.4	Overlap of STP members	145
6.3.5	Firing rate of STP members	147
6.4	Discussion	147
7	DISCUSSION AND PERSPECTIVES	157
