Contents

1	Introduction	1
1.1	Water vapor in the lower stratosphere	5
1.2	Convective storms in the extra-tropics	6
1.3	Pyro-convection in the extra-tropics	9
2	Theoretical background of convective storms	11
3	Balloon-borne measurements	22
3.1	Vaisala Radiosonde RS41	25
3.2	Electrochemical concentration cell (ECC)	27
3.3	Cryogenic frost-point hygrometer (CFH)	30
3.4	Towards the development of a new CFH cooling agent	33
4	Enhanced water vapor in the LS caused by convective storms	44
4.1	Data and methods	46
4.1.1	Balloon measurements within MOSES	46
4.1.2	Aura Microwave Limb Sounder (MLS)	47
4.1.3	ECMWF ERA5	48
4.1.4	Trajectory calculation	49
4.2	Measurement results and analysis	49
4.2.1	Meteorological situation at the time of the case study	49
4.2.2	Water vapor injection captured by balloon profiles	51
4.2.3	Source of the ozone peak at 150 hPa	53

4.2.4	Comparison to the ERA5 reanalysis	56
4.2.5	Origin and evolution of the water vapor enhancement along the CLaMS trajectories	59
4.2.6	Overshooting events in satellite data	64
4.3	Discussion	68
4.4	Conclusions	73
5	Highly enhanced stratospheric water vapor caused by forest fires	75
5.1	Methods	78
5.1.1	Plume identification	78
5.2	Water vapor signal in the LS	79
5.3	Horizontal plume distribution	84
5.4	Vertical plume distribution	86
5.5	PV anomalies in ECMWF ERA5	88
5.6	Summary and conclusion	92
6	Summary and outlook	95
	List of figures	98
	List of tables	101
	List of abbreviations	102
	Bibliography	105
A	Theory of balloon-launching operations and buoyancy	124
B	Supplements for Chapter 3	127
C	Supplements for Chapter 4	129
D	Supplements for Chapter 5	130
