Oxidation of monoterpenes studied in atmospheric simulation chambers

Luisa Lamberta Hantschke

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 589

ISSN 1866-1793

ISBN 978-3-95806-653-3

Inhaltsverzeichnis

1	Introduction	1
1.1	Emissions of monoterpenes in the atmosphere	2
1.2	Tropospheric oxidation chemistry	4
1.3	Objectives of this thesis	12
2	Atmospheric Simulation chambers	17
2.1	The atmospheric simulation chamber SAPHIR at Forschungszentrum Jülich	18
2.1.1	Instrumentation	19
2.1.2	Experiment procedure	21
2.2	The atmospheric simulation chamber SAPHIR-STAR at Forschungszentrum Jülich	23
2.3	The free-jet flow system at the TROPOS institute in Leipzig	24
3	Chemical Ionization Mass Spectrometry	27
3.1	RO _x radical detection by CIMS	27
3.2	Principle of Chemical Ionization Mass Spectrometry	30
3.3	Optimization of the CIMS instrument for measurements of RO ₂ radicals	34
3.3.1	Preparation of purified amine-N ₂ mixtures	34
3.3.2	Dosing of the amine-N ₂ mixture to the CI-inlet	36
3.3.3	Addition of water vapour to the sheath flow	39
3.3.4	Dilution of the sampled air flow	40
3.4	Detection of peroxy radicals from the OH reaction with β -pinene by CIMS using amine as primary ions	41
3.4.1	Determination of the sensitivity of the CIMS instrument for RO ₂ radical detection	44
4	Box models for chamber experiments	47
4.1	Modelling of experiments in the SAPHIR chamber	48
4.2	Modelling of experiments in the free-jet flow system	49
5	Oxidation of Δ^3-carene	50
5.1	Introduction	51

5.2	Methods	52
5.2.1	Experiments in the SAPHIR chamber	52
5.2.2	Instrumentation	54
5.2.3	OH reactivity and peroxy radical distribution	54
5.2.4	Determination of reaction rate constants and OH yield from ozonolysis	55
5.2.5	Determination of product yields-organic nitrate RONO_2	55
5.2.6	Determination of product yields	56
5.3	Results and discussion	57
5.3.1	Ozonolysis of Δ^3 -carene	57
5.3.2	OH reaction of Δ^3 -carene	60
5.3.3	Photooxidation of caronaldehyde	64
5.3.4	Production and destruction rates of ROx radicals in the ox- idation of Δ^3 -carene	66
5.4	Summary and conclusions	68
5.5	References	68
6	Photooxidation of myrcene	72
6.1	Introduction	74
6.2	Oxidation mechanism of myrcene	74
6.3	Methods	75
6.3.1	Experiments in the SAPHIR chamber	75
6.3.2	Measurement of trace gas concentrations	79
6.3.3	Measurement of trace radical concentrations	79
6.3.4	VOC reactivity and RO_2 speciation in myrcene experiments	80
6.4	Determination of organic nitrate yields	82
6.4.1	Test experiments with methane and α -pinene	83
6.5	Experimental analysis of the chemical budgets of OH, HO_2 , RO_2 and ROx	83
6.5.1	Radical production, destruction and regeneration reactions	84
6.5.2	Radical production and destruction in a test experiment with methane	85
6.6	Results and discussion of the experiments with myrcene	85
6.6.1	Product yields of the reactions of myrcene hydroxy peroxy radicals with NO	86
6.6.2	Primary radical production and termination	88
6.6.3	ROx radical chain propagation reaction	89
6.7	Summary and conclusions	91
6.8	References	93

7 Photooxidation of β-pinene	98
7.1 β -pinene oxidation mechanism	98
7.2 Experiments investigating the β -pinene oxidation mechanism	101
7.2.1 Experiments in the free-jet flow system	102
7.2.2 Experiments in the SAPHIR-STAR chamber	103
7.2.3 Determination of OH concentrations in the experiments	105
7.3 Measurement of the relative distribution of RO ₂ radicals	106
7.3.1 Measurements in the free-jet flow system	108
7.3.2 Measurements in the SAPHIR-STAR chamber	110
7.4 Discussion of the RO ₂ formation mechanism	111
7.4.1 Relevance of autoxidation reactions	111
7.4.2 Determination of unimolecular rate constants	113
8 Summary and Conclusions	118
8.1 Development of a detection scheme for RO ₂ based on CIMS	118
8.2 Monoterpene oxidation	118
8.2.1 Overview of experiments	118
8.2.2 Organic nitrate yields	119
8.2.3 RO _x radical budget	121
8.2.4 Product yields	122
8.2.5 Importance of unimolecular reactions in the oxidation mechanism of β -pinene	123
8.3 Implications for atmospheric chemistry	123
References	125
Danksagung	139
Acronyms	141
A Appendix	143
A.1 Supplementary materials to Chapter 5	143
A.2 Supplementary materials to Chapter 6	150
A.3 Supplementary materials to Chapter 7	160
A.3.1 β -pinene mechanism used in the model	160
B Anhänge gemäß Prüfungsordnung	185
B.1 Own contributions to publications	186
B.2 Erklärung zur Dissertation	187
