NiFe Layered Double Hydroxide Catalysts for Oxygen Evolution Reaction in Alkaline Water Electrolysis

Wulyu Jiang

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment Band / Volume 590

ISSN 1866-1793 ISBN 978-3-95806-658-8

Contents

Abstract I

Zusammenfassung II

Contents IV

Chapter 1 Introduction 1

1.1 Research background 1

1.1.1 Hydrogen economy 1

1.1.2 Water electrolysis technology 3

1.2 Progress of nickel based OER catalysts 5

1.2.1 Ni metal and Ni oxides 5

1.2.2 Ni oxyhydroxide 7

1.2.3 Perovskite structure 9

1.2.4 Spinel structure 11

1.3 NiFe based LDH catalysts 14

1.3.1 OER activity of LDH catalysts 14

1.3.2 Progress of NiFe-based LDH catalysts 18

1.4 Research motivation and goals 23

Chapter 2 Experiment methods 27

2.1 Chemicals and material synthesis 27

2.2 Electrochemical tests 28

2.2.1 Half cell measurements 28

2.2.2 Single cell measurements 30

2.3 Physical characterizations 32

2.3.1 X-ray diffraction 32

2.3.2 Electron microscopy 33

2.3.3 Raman spectroscopy 34

2.3.4 Infrared spectroscopy 35

2.3.5 Mössbauer spectroscopy 35

2.3.6 X-ray photoelectron spectroscopy 36

2.3.7 Inductively coupled plasma 36
2.3.8 X-ray absorption spectroscopy 37

Chapter 3 Electrochemical protocols and benchmark for OER catalysts 39
3.1 Background and motivation 39
3.2 Test strategy for OER activity 40
3.3 Test strategy for OER stability 43
3.4 Test setup components 46
3.4.1 Counter electrode 46
3.4.2 Electrochemical cell 48
3.4.3 Electrolyte 50
3.5 Catalyst loading 55
3.5.1 Loading effect on OER activities 55
3.5.2 Loading effect on cycling stability 60
3.5.3 Loading effect on potentiostatic stability 62
3.6. Substrate effect 64
3.6.1 Substrate effect on OER activity 64
3.6.2 Substrate effect on cycling stability 66
3.6.3 Substrate effect on potentiostatic stability 67
3.7 Benchmark Ni-based OER catalysts 69
3.8 Chapter summary 72

Chapter 4 Composition dependent structure and OER property of NiFe LDH catalysts 75
4.1 Background and motivation 75
4.2 Synthesis and characterization of NiFe LDHs 76
4.3 Catalytical performance of NiFe LDHs 88
4.3.1 Half cell performance 88
4.3.2 Single cell performance 91
4.4 Correlation of structure and OER property of NiFe LDHs 95
4.4.1 Electronic structure and active intermediates for activity 95
4.4.2 Iron dissolution and degradation mechanism for stability 99
4.5 Chapter summary 105

Chapter 5 Optimization of the structure and OER property of NiFe LDH

catalysts 107
5.1 Introduction part 107
5.2 Introduction of polar formamide 107
5.3 Incorporation of interlayer ions 114
5.4 Heat treatment 119
5.5 Hydrothermal treatment 123
5.6 Chapter summary 130
Chapter 6 Discussion 131
Chapter 7 Conclusion 139
List of Abbreviations 141
Acknowledgements 143
References 145
