# Contents

<b>Abstract</b>	i
<b>Kurzfassung</b>	iii
<b>Nomenclature</b>	xxi
<b>1 Introduction</b>	1
1.1 Motivation and Objective . . . . .	1
1.2 Structure . . . . .	3
<b>2 Energy Supply Systems Modeling in Literature</b>	5
2.1 Modeling Approaches and Frameworks . . . . .	6
2.1.1 Modeling Methods . . . . .	7
2.1.2 Spatial and Temporal Representation . . . . .	8
2.1.3 Features of Optimization Frameworks . . . . .	10
2.1.4 Optimization Frameworks and Auxiliary Software . . . . .	11
2.2 German Scenarios for Energy Supply Infrastructure . . . . .	12
2.2.1 Future German Electricity Infrastructure in Literature . . . . .	13
2.2.2 Future German Hydrogen Infrastructure in Literature . . . . .	15
2.2.3 Energy System 2050 Scenarios for Germany . . . . .	18
2.3 Infrastructure of Future Energy Systems . . . . .	19
2.3.1 Electricity Infrastructure . . . . .	21
2.3.2 Hydrogen Infrastructure . . . . .	36
2.3.3 Infrastructure for Methane-containing Gases . . . . .	48
2.4 Summary . . . . .	56
<b>3 Spatio-temporal Energy System Optimization</b>	59
3.1 Spatial and Temporal Energy System Representation . . . . .	60

3.1.1	Spatial Discretization, Clustering and Data Aggregation . . . . .	61
3.1.2	Temporal Discretization, Clustering and Data Aggregation . . . . .	64
3.2	<i>FINE</i> - A <u>F</u> ramework for <u>I</u> Ntegrated <u>E</u> nergy System Assessment . . . . .	65
3.2.1	Optimization Formulation . . . . .	66
3.2.2	Python Implementation . . . . .	84
3.3	Scenario Generation Workflow . . . . .	86
3.4	Discussion . . . . .	88
3.5	Summary . . . . .	91
<b>4</b>	<b>Setup of a Future German Energy Supply Systems Model</b>	<b>93</b>
4.1	Spatial and Temporal Context . . . . .	95
4.2	Basic Energy and Mass Flows . . . . .	95
4.2.1	Final Energy Demands . . . . .	96
4.2.2	Imports and Exports . . . . .	99
4.2.3	Carbon Dioxide Restriction . . . . .	101
4.3	Infrastructure Modeling . . . . .	102
4.3.1	Electricity Infrastructure . . . . .	103
4.3.2	Hydrogen Infrastructure . . . . .	121
4.3.3	Infrastructure for Methane-containing Gases . . . . .	127
4.4	Discussion . . . . .	131
4.5	Summary . . . . .	133
<b>5</b>	<b>Optimized Cross-linked Infrastructure Scenarios for Germany</b>	<b>135</b>
5.1	<i>BELS</i> - <u>B</u> asic <u>E</u> lectricity <u>S</u> upply Scenarios . . . . .	137
5.1.1	Optimal System Configurations under Varying CO <sub>2</sub> Reduction Targets . . . . .	138
5.1.2	Supply System Assessment (80% CO <sub>2</sub> Reduction) . . . . .	143
5.1.3	Supply System Assessment (100% CO <sub>2</sub> Reduction) . . . . .	150
5.1.4	Scenario Variations . . . . .	159
5.2	<i>BELS</i> <sup>+</sup> - <u>B</u> asic <u>E</u> lectricity <u>S</u> upply with a Centralized H <sub>2</sub> -Infrastructure	167
5.2.1	Optimal System Configurations under Varying CO <sub>2</sub> Reduction Target . . . . .	168
5.2.2	Supply System Assessment (100% CO <sub>2</sub> Reduction) . . . . .	172
5.2.3	Scenario Variations . . . . .	181
5.3	<i>BLHYS</i> - <u>B</u> asic <u>E</u> lectricity and <u>HY</u> drogen <u>S</u> upply Scenarios . . . . .	190
5.3.1	Optimal System Configurations under Varying CO <sub>2</sub> Reduction Targets and GH <sub>2</sub> Demands . . . . .	191

5.3.2 Supply System Assessment (L-GH <sub>2</sub> , 80% CO <sub>2</sub> Reduction) . . . . .	199
5.3.3 Supply System Assessment (H-GH <sub>2</sub> , 100% CO <sub>2</sub> Reduction) . . . . .	205
5.3.4 Scenario Variations . . . . .	213
5.4 Scenario Cross-cutting Discussions . . . . .	228
5.4.1 Electricity and Hydrogen Supply Concepts in a Future German Energy System under Varying CO <sub>2</sub> Reduction Targets	228
5.4.2 The Role of Individual Infrastructure Technologies . . . . .	231
5.4.3 The Role of International Energy Imports and Exports . . . . .	240
5.4.4 Cross-linked Infrastructure: Opportunities and Synergies . . . . .	242
5.4.5 Scenarios in Comparison to Literature . . . . .	243
5.4.6 An Urgent Need for Change - Comparison to German Energy Supply Infrastructure in 2017 / 2018 . . . . .	253
5.5 Summary . . . . .	259
<b>6 Summary and Concluding Remarks</b>	<b>265</b>
6.1 Scope and Objective . . . . .	265
6.2 Chosen Modeling Approach . . . . .	266
6.3 Scenario Results . . . . .	267
6.4 Conclusions . . . . .	270
<b>Appendix A Appendix - Model Input Parameters</b>	<b>273</b>
A.1 Basic Electricity Demand . . . . .	273
A.2 Basic Hydrogen Demand . . . . .	274
A.3 Electricity Imports and Exports . . . . .	275
A.4 Offshore Wind Turbines . . . . .	279
A.5 Storage of Methane-rich Gases in Salt Caverns . . . . .	280
A.6 Hydrogen Transmission and Distribution . . . . .	281
A.7 Model Parameter Tables . . . . .	283
<b>Appendix B Appendix - Scenario Results</b>	<b>293</b>
B.1 BELS Branch . . . . .	293
B.2 BELS <sup>+</sup> Branch . . . . .	305
B.3 BLHYS Branch . . . . .	317
<b>Bibliography</b>	<b>341</b>
