# Contents

<b>Abstract</b>	vii
<b>Kurzfassung</b>	ix
<b>1 Introduction</b>	1
<b>2 Background</b>	5
2.1 Perovskite energy materials . . . . .	5
2.2 The defect structure of SrTiO <sub>3</sub> . . . . .	8
2.3 Mass transport in solids . . . . .	12
2.4 Defect chemistry of donor- and acceptor-doped SrTiO <sub>3</sub> . . . . .	13
<b>3 Experimental methods</b>	17
3.1 Sample synthesis and processing . . . . .	17
3.1.1 Powder synthesis . . . . .	17
3.1.2 Pulsed laser deposition . . . . .	20
3.1.3 Thermal annealing . . . . .	26
3.2 Characterization techniques . . . . .	27

3.2.1	Imaging techniques . . . . .	28
3.2.2	Diffraction and scattering analysis . . . . .	31
3.2.3	X-ray photoelectron spectroscopy . . . . .	35
3.2.4	Quantitative bulk analysis . . . . .	38
3.2.5	Secondary ion mass spectrometry . . . . .	39
3.2.6	Vibrating sample magnetometry . . . . .	40
<b>4</b>	<b>Synthesis, structural properties and exsolution response of STNNi</b>	<b>41</b>
4.1	Sintered ceramics . . . . .	41
4.2	Epitaxial thin films . . . . .	47
4.2.1	Preparation of SrTiO <sub>3</sub> substrates . . . . .	47
4.2.2	Growth of epitaxial STNNi thin films on SrTiO <sub>3</sub> . . . . .	48
4.3	Characterization of the exsolution response upon reducing annealing	56
4.4	Exsolution of embedded nanostructures as alternative exsolution pathway . . . . .	61
<b>5</b>	<b>Exsolution of embedded nanoparticles in defect engineered STNNi</b>	<b>65</b>
5.1	Control of the defect structure based on the applied laser fluence . .	65
5.2	Exsolution behavior in defect engineered STNNi . . . . .	70
5.3	Control of metal exsolution based on embedded nanostructures . .	71
<b>6</b>	<b>Dynamics of the exsolution response</b>	<b>75</b>
6.1	Structural relaxation of the host lattice . . . . .	75
6.2	Surface chemistry changes . . . . .	79

---

6.3	Particle formation and surface limitations . . . . .	81
6.4	Simultaneous chemical and structural investigations of the STNNi surface . . . . .	87
6.5	Bulk and surface material response during metal exsolution . . . . .	90
<b>7</b>	<b>The role of surface space charge regions for metal exsolution</b>	<b>93</b>
7.1	Surface passivation of exsolution-active perovskites . . . . .	94
7.2	Investigation of surface space charge regions by SIMS . . . . .	100
7.3	Surface engineering of the redox chemistry . . . . .	105
7.4	Surface space charge regions govern the kinetics of metal exsolution	107
<b>8</b>	<b>Influence of the crystallographic orientation</b>	<b>111</b>
8.1	Synthesis of polycrystalline epitaxial STNNi thin films . . . . .	112
8.2	Evaluation of the facet-dependent exsolution behavior . . . . .	115
8.3	Discussion: Preferential exsolution of Ni at (001)-facets of STNNi . .	117
<b>9</b>	<b>Summary and Conclusions</b>	<b>119</b>
<b>A</b>	<b>Structural analysis of epitaxial STNNi thin films by SAED</b>	<b>123</b>
<b>B</b>	<b>Evolution of the SrTiO<sub>3</sub> surface morphology under reducing annealing</b>	<b>125</b>
<b>C</b>	<b>Finite-element electrostatic space charge simulations</b>	<b>127</b>
<b>D</b>	<b>Non-reversibility of Ni exsolution in STNNi</b>	<b>131</b>
