Contents

Zusammenfassung	v
Synopsis	vii
Introduction	ix
1 On-surface functionalization	1
1.1 Energy level alignment at the metal–organic interface	2
1.2 Transition metal complexes on surfaces	3
1.3 Coordination of axial ligands and <i>surface trans-effect</i>	5
2 Methods	7
2.1 Photoemission spectroscopy	7
2.1.1 X-ray photoemission spectroscopy (XPS)	9
2.1.2 Angle-resolved photoemission spectroscopy (ARPES)	11
2.2 Absorption spectroscopy	13
2.2.1 Near-edge absorption spectroscopy (NEXAFS)	14
2.2.2 X-ray magnetic circular dichroism (XMCD)	16
2.2.3 Infrared reflection–absorption spectroscopy (IRAS)	17
2.3 Low energy electron diffraction (LEED)	18
2.4 Scanning tunneling microscopy (STM)	18
3 Stabilization of catalytically and magnetically active sites by on-surface coordination	21
3.1 NiTPP on oxygen-passivated Cu(100): the free-standing reference	21
3.2 NiTPP on bare and oxygen-passivated Cu(100)	24
3.3 CoTPP on bare and oxygen-passivated Cu(100)	37
3.4 CoOEP on bare and oxygen-passivated Cu(100)	46
3.5 NiTPP and CoTPP on Ag(100)	48
3.6 NiTPP and CoTPP on Au(111)	54
4 The role of molecular conformation: temperature-induced planarization	67
4.1 On-silver temperature-induced planarization	67
4.1.1 CoOEP annealing on Ag(100)	67
4.1.2 CoTPP and NiTPP annealing on Ag(100)	74
4.2 On-copper temperature-induced planarization	80
4.2.1 CoOEP annealing on Cu(100)	81

4.2.2	NiTPP on Cu(100): post-deposition annealing	82
4.2.3	NiTPP on Cu(100): during deposition annealing	93
5	Functionalization of NiPc and FePc	105
5.1	NiPc on Cu(100) and O-Cu(100)	105
5.2	FePc on Cu(100) and O-Cu(100)	109
	Summary and conclusions	123
	Appendix	127
A	Highly oriented molecular p-n junctions	127
	Abbreviations	135
	Publications and conference contributions	139
	Bibliography	169
