Membrane Reactor Concepts for Power-to-Fuel Processes

Hong Huang

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment Band / Volume 610

ISSN 1866-1793 ISBN 978-3-95806-703-5

Table of contents

Abstract ..... **I**

Kurzfassung ..... **III**

Table of contents ..... **IV**

1 Introduction and objectives **1**

1.1 The Power-to-Fuel concept 1
1.1.1 Energy efficiency 4
1.1.2 Cost competitiveness 5
1.2 Role of reactors and separators for Power-to-Fuel processes 6
1.3 Research contents and framework 8
1.4 Thesis structure 10

2 State-of-the-art **13**

2.1 Suitability of DMC and MF as fuels 13
2.2 Available production pathways of DMC 15
2.2.1 Oxidative carbonylation of methanol 15
2.2.2 Transesterification 19
2.2.3 Direct urea methanolysis 21
2.2.4 Indirect urea methanolysis 23
2.2.5 Direct synthesis from CO_2 24
2.2.6 Process development and analysis 24
2.3 Available production pathways of MF 27
2.3.1 Carbonylation of methanol 27
2.3.2 Dehydrogenation of methanol 28
2.3.3 Other available pathways 29
2.3.4 Process development and analysis 29
2.4 Reverse water gas shift 30
2.4.1 Catalysis and kinetics 30
2.4.2 Reactor design and simulation 32
2.5 Dry reforming of methane 33
2.5.1 Catalysis and kinetics 34
2.5.2 Reactor design and simulation 36

3 Theory and Methods 39

3.1 Techno-economic analysis 39
3.1.1 Technology readiness level 39
3.1.2 Green chemistry principles 40
3.1.3 Power-to-Fuel efficiency 41
3.1.4 Cost estimation 42
3.2 Computational fluid dynamics modeling 48
3.2.1 Mass balance 48
3.2.2 Heat balance 49
3.2.3 Momentum balance 49
3.2.4 Reaction kinetics and mass transport limitations 50
3.3 Membrane permeation and modeling 54
3.3.1 Zeolite membranes for water separation 54
3.3.2 Ceramic-carbonate dual-phase membranes for CO_2 separation 58
3.3.3 Pd-membranes for H_2 separation 60
3.3.4 Membrane reactor concept 65
3.3.5 Membrane permeation modeling 67
3.3.6 Dimensionless numbers for membrane reactors 69
3.4 Indicators for membrane reactor evaluation 71

4 Process analysis of DMC and MF 73

4.1 Process analysis of DMC production pathways 73
4.1.1 Process screening of DMC production pathways 73
4.1.2 Thermodynamic analysis of the selected pathways 75
4.1.3 Process design and simulation 77
4.1.4 Techno-economic performance 82
4.2 Process analysis of MF production pathways 93
4.2.1 Process screening of MF production pathways 93
4.2.2 Thermodynamic analysis of the selected pathways 94
4.2.3 Process design and simulation 95
4.2.4 Techno-economic performance 97
4.3 Cross-pathway comparison 103

5 Membrane reactor selection and matching 105

5.1 Mapping of reaction-membrane-reactor concept 105
5.2 Theoretical calculations for quantified analysis 106
5.2.1 Exemplification 108

5.2.2 Effect of stoichiometric coefficient 113

6 Development of membrane reactor concepts 115

6.1 Model geometry and meshing 115
6.2 Setups in ANSYS Fluent 118
6.2.1 Physical models and material properties 118
6.2.2 Cell zone and boundary conditions 119
6.2.3 Solution strategy and convergence 121
6.3 Water permeable membrane reactor concept for reverse water gas shift 122
6.3.1 Model validation with the reference fixed-bed reactor 122
6.3.2 Evaluation of the water permeable membrane reactor 123
6.4 CO_2 permeable membrane reactor concept for reverse water gas shift 131
6.4.1 Conversion and space-time yield 131
6.4.2 CO_2 distribution and permeation flux 134
6.4.3 Effect of the geometry characteristic 135
6.5 H_2 permeable membrane reactor concepts for dry reforming of methane 137
6.5.1 Model validation 137
6.5.2 Base case comparison 138
6.5.3 Effect of feed ratio and temperature 141
6.5.4 Effect of pressure and geometry characteristic 143
6.6 Comparison of the membrane reactor concepts 145

7 Summary and conclusions 147
