Introduction 1

Material design at the nanometric scale 1

High-resolution scanning transmission electron microscopy 2

Contents of this thesis 3

1 Fundamental aspects of TEM 5

Summary . . . 5

1.1 Instrumentation . . . 5

1.1.1 Methodological principle . . . 5

1.1.2 Magnetic lenses and operation modes . . . 6

1.1.3 Electron sources . . . 10

1.1.4 Electron detectors . . . 14

1.2 Beam-specimen interaction . . . 15

1.2.1 Relativistic correction . . . 15

1.2.2 Paraxial approximation . . . 17

1.2.3 Potential and scattering factors . . . 18

1.2.4 Multislice solution . . . 19

1.2.5 Numerical sampling . . . 21

1.2.6 Thin specimen approximations . . . 22

1.3 Optical aspects of STEM . . . 23

1.3.1 Lateral resolution for a diffraction-limited system . . . 23

1.3.2 Optical aberrations . . . 24

1.3.3 Depth of focus . . . 26

1.3.4 Principle of reciprocity under the phase object approximation . . . 27

1.4 Role of wave coherence and energy-loss . . . 29

1.4.1 Partial coherence and the density matrix . . . 29

1.4.2 Spatial and temporal incoherence of the illumination . . . 31

1.4.3 Lattice vibrations and phonon excitation . . . 32

1.4.4 Inelastic scattering . . . 34

1.4.5 Channelling dynamics in quasi-elastic conditions . . . 35

1.4.6 Specimen damage and electron dose 37

Discussion 38

2 Imaging modes in STEM and processing of four-dimensional data 39

Summary 39

2.1 Imaging modes in STEM and CTEM 39

2.1.1 Momentum-resolved STEM 39

2.1.2 CTEM imaging and phase contrast 42

2.1.3 Conventional STEM 43

2.1.4 Z-contrast 44

2.1.5 First moment $\langle \vec{q} \rangle$ and differential phase contrast 47

2.1.6 Analysis based on multiple micrographs 50

2.2 Self-consistent calibration of diffraction coordinates 52

2.2.1 Mapping of reciprocal space in the presence of elliptical distortion 52

2.2.2 Correction of the rotation error 54

2.2.3 Signal extraction by virtual detectors 55

2.3 Calculation, derivation and integration of the first moment $\langle \vec{q} \rangle$ 56

2.3.1 Extraction from the MR-STEM data 56

2.3.2 Iterative finite differences 56

2.3.3 Fourier integration 57

2.4 Scalar second moment $\langle q^2 \rangle$ 58

2.4.1 Calculation of $\langle q^2 \rangle$ in diffraction space 58

2.4.2 Prediction of convergence properties by Mott scattering 61

2.4.3 Verification by multislice simulation 62

Discussion 64

3 Influence of plasmon scattering on low-angle electron diffraction 67

Summary . . . 67

3.1 Importance of inelastic scattering for momentum-resolution . . . 67

3.2 Energy-filtered MR-STEM of Pt in [110] orientation . . . 68

3.2.1 Experimental set-up . . . 68

3.2.2 Determination of a common interval of thickness . . . 70

3.2.3 Results and analysis . . . 71

3.3 Multislice simulation model including single plasmon-losses . . . 74

3.4 Role of multiple plasmon excitation . . . 75

3.5 EF-MR-STEM employing multiple energy windows . . . 76

3.5.1 Experimental set-up . . . 76

3.5.2 Measurement of incident electron intensity emitted by a CFEG . . . 77

3.5.3 Results and analysis . . . 79

3.6 Convolutional model for the inclusion of plasmon scattering . . . 80

3.6.1 Concept and implementation . . . 80

3.6.2 Verification through a simulation . . . 81

3.6.3 Application to the experimental data . . . 82

Discussion . . . 82

4 Focus-dependence of STEM signals and prospects for surface detection 89

Summary . . . 89

4.1 Limitations of conventional depth sectioning approaches . . . 89

4.2 Case study on α-$\mathrm{In_2Se_3}$ . . . 90

4.2.1 Experimental set-up . . . 90

4.2.2 Results and analysis . . . 91

4.3 Interpretation of experimental results through simulation . . . 92

4.3.1 Simulation parameters and focus-dependences . . . 92

4.3.2 C-STEM signals . . . 94

4.3.3 MR-STEM-specific signals . . . 95

4.3.4 Role of acceptance angle in the behavior of $\langle q^2 \rangle$ . . . 96

4.3.5 Inversion of $\langle \vec{q} \rangle$ across the focus axis . . . 98

4.4 Multislice simulation of bulk Au . . . 98

4.5 Surface retrieval using a focal series . . . 99

4.6 Focus-dependence for different depths of focus . . . 104

4.7 Role of geometrical aberrations . . . 105

4.7.1 Third-order spherical aberration . . . 105

4.7.2 First-order astigmatism . . . 106

4.7.3 Second-order coma and astigmatism . . . 107

4.8 Influence of the partial spatial and temporal coherence . . . 107

4.9 Other factors relating to the specimen . . . 108

4.9.1 Specimen tilt . . . 108

4.9.2 Carbon contamination . . . 109

4.9.3 Temperature . . . 110

4.10 Comparison with other materials . . . 111

Discussion . . . 112

General discussion **115**

Scalar second moment $\langle q^2 \rangle$ . . . 115

Role of inelastic scattering in dynamical electron diffraction . . . 115

Influence of probe focus on a variety of MR-STEM signals . . . 116

Conclusion **119**

Prospects **121**

Topography mapping and quantitative analysis via focal series 121

Imaging of weakly scattering and dose-sensitive objects 121

Shape sensitivity in first moment STEM 122

New detectors for the direct measurement of momentum transfer 123

Bibliography **125**
