Advances in Photoemission Orbital Tomography

Anja Haags

Schriften des Forschungszentrums Jülich
Reihe Information / Information

Band / Volume 104

ISSN 1866-1777

ISBN 978-3-95806-766-0

Contents

1	Introduction	1
2	Concepts of Photoemission Orbital Tomography	7
2.1	Photoelectron spectroscopy	7
2.2	Photoemission differential cross section	10
2.3	Angle-resolved photoemission spectroscopy	12
2.4	Photoemission orbital tomography	14
2.4.1	Plane wave final state approximation	17
2.4.2	Independent atomic center approximation	19
2.4.3	Scattered-wave approximation	23
2.4.4	Toroidal electron analyzer	34
2.4.5	Measurement modes	36
2.4.6	Photon flux calibration	39
2.4.7	Treatment of experimental data	42
3	Momentum Space Imaging of σ Orbitals for Chemical Analysis	45
3.1	Introduction	46
3.1.1	Orbitals in surface chemical analysis	46
3.1.2	Ullmann-type reactions on metal surfaces	47
3.1.3	Potential products of DBBA/Cu(110)	48
3.1.4	σ orbitals in POT	49
3.2	Thermal reaction of DBBA/Cu(110)	50
3.2.1	Band maps	51
3.2.2	Electronic structure calculations	52
3.2.3	Identification of adsorption species	54
3.2.3.1	Frontier π orbitals	54
3.2.3.2	Uppermost σ orbitals	56
3.2.3.3	π orbitals below Cu d band	61
3.3	Energy level alignment	66
3.3.1	Approaches 1 & 2	67
3.3.2	Experimental MOPDOS of σ orbitals	69
3.3.3	Binding energies of π orbitals	77
3.3.4	Benchmarking theory	82
3.4	Conclusion	89

4	Aromatic Stabilization in Kekulene	91
4.1	Introduction	92
4.1.1	Literature review	94
4.1.2	Experimental details	95
4.2	STM	97
4.3	Aromaticity of kekulene from geometric perspective	98
4.3.1	DFT optimization	98
4.3.2	Quantitative analysis of aromaticity	101
4.4	Aromaticity of kekulene from electronic perspective	105
4.4.1	POT	105
4.4.2	POT analysis of the HOMO	108
4.4.3	Bond order analysis	114
4.5	Conclusion	117
5	Identification of Nonplanar Iso-kekulene on Cu(110)	119
5.1	Introduction	120
5.2	Experimental details	124
5.2.1	Synthesis of precursor molecule	124
5.2.2	On-surface synthesis on Cu(110)	124
5.3	Experimental results	124
5.3.1	STM	124
5.3.2	Band maps	128
5.3.3	POT	128
5.4	DFT calculations	129
5.4.1	Geometry relaxations	130
5.4.2	Electronic structure calculations	134
5.5	Discussion	139
5.5.1	Deconvolution	139
5.5.2	Intensity profile analysis	140
5.5.3	DFT-simulated STM-contrast	142
5.5.4	Relation between substrate symmetry and reaction products	143
5.6	Conclusion	145
6	Incidence-Angle-Dependent POT to Approach Spherical Wave Approximation	149
6.1	Introduction	150
6.2	Investigated systems	151
6.2.1	Benzene/Pd(110)	151
6.2.2	Bisanthene/Cu(110)	155
6.2.3	Epitaxial monolayer graphene	156
6.3	Data analysis procedure	158

6.4	Results	166
6.4.1	Benzene/Pd(110)	166
6.4.2	Bisanthene/Cu(110)	171
6.4.3	Epitaxial monolayer graphene	176
6.5	Conclusion and outlook	183
7	Final State Descriptions for Photon-Energy-Dependent POT	185
7.1	Introduction	186
7.2	Sample preparation	188
7.3	Band maps	189
7.4	Overview of measurements	191
7.5	Experimental $h\nu$ -dependent intensity distributions of EMLG and QFMLG	192
7.6	SWA: A simple extension of the plane-wave final state	199
7.6.1	Scattered-wave approximation	203
7.7	Conclusion	208
7.8	Outlook	209
8	Summary and Conclusion	211
A	Data Analysis Software	215
B	MOPDOS Obtained with Approach 2	219
C	LEED of Iso-kekulene/Cu(110)	225
D	Photon-Energy-Dependent POT of Graphene	227
	Bibliography	235
	List of Own Publications	251
	Acknowledgments	255
