Band / Volume 66

ISSN 1868-8489

ISBN 978-3-95806-780-6

Contents

Abstract	ii
Symbols	vi
1 Introduction	1
2 Theoretical Background	5
2.1 The Pedestrian	5
2.2 The Crowd	6
2.2.1 Density, Velocity and Flow	7
2.2.2 Self-Organization in Crowds	9
2.2.3 Modelling of Crowds	12
3 Single-File Motion	16
3.1 Empirical Findings	17
3.1.1 Stop-and-Go Waves, Phantom Jams, and Phase Separation	18
3.1.2 Fundamental Diagram	19
3.2 Force-Based Models	20
3.2.1 Conceptual Problems	20
3.3 Following Models based on the Time-Gap	23
3.3.1 Categorizing Following Models	23
3.3.2 Generalized Optimal Velocity Models	25
3.3.2.1 Time-Gap and Optimal Velocity Models	26
3.3.2.2 Reaction and Anticipation Time	27
3.3.2.3 Summary of Model Relations	28
3.3.2.4 Relation to Velocity Obstacles	29
3.3.3 Stability Analysis	32
3.3.3.1 Platoon Stability	33
3.3.3.2 Overdamping	35
3.3.3.3 String Stability	36
3.3.4 Noise Induced Stop-and-Go Waves	39
3.3.5 The Fundamental Diagram: Scaling Analysis of the OV Model . .	42
3.3.6 Summary	45
3.4 Following Models based on the Time-to-Collision	46
3.4.1 Definition of Time-to-Collision	46
3.4.2 Definition of the Model and Inherent Problems	48
3.5 Conclusion	49

4	Classification of Crowds with dimensionless Numbers	51
4.1	Intrusion and Avoidance	52
4.2	Delineation of Crowd Regimes	54
4.2.1	Description and curation of the datasets	56
4.2.1.1	Summary of the datasets	56
4.2.1.2	Splitting and merging scenarios	57
4.2.1.3	The case of the <i>Outdoor</i> scenario (passive observations)	58
4.2.1.4	Processing and smoothing of trajectories	59
4.2.1.5	Computation of the $\mathcal{I}n$ and $\mathcal{A}v$ numbers	60
4.2.2	Variations of the Phase Diagram	60
4.2.2.1	Variations in the definitions of $\mathcal{I}n$ and $\mathcal{A}v$	60
4.2.2.2	Use of the density instead of $\mathcal{I}n$	61
4.3	Correlations between $\mathcal{I}n$ and $\mathcal{A}v$	63
4.3.1	Crosscorrelation between $\mathcal{I}n$ and $\mathcal{A}v$	63
4.4	Self-Organized Structure in Crowds	65
4.4.1	Definition of the Pair-Distribution Function	66
4.4.1.1	Calculation in various Scenarios	67
4.4.2	Insights into the crowd's structure in different scenarios	68
4.4.2.1	Effect of pairs and social groups on the pdf	72
4.5	Summary and Outlook	73
4.5.1	Outlook: Motivation at Bottlenecks	74
5	Perturbative Models	78
5.1	Perturbative Analysis	79
5.1.1	Generic cost function	80
5.1.2	Reference situation: The isolated agent	81
5.1.3	The $\mathcal{A}v$ -model	82
5.1.4	The $\mathcal{I}n$ -model	82
5.1.5	The $\mathcal{A}v \star \mathcal{I}n$ -model	83
5.1.6	Implementation	84
5.2	Waiting Scenario	84
5.3	Cross Flow	86
5.4	Bidirectional Flow	89
5.5	The Intruder Scenario	91
5.5.1	Empirical Results	92
5.5.2	Results of the $\mathcal{I}n$ -model	94
5.5.3	Results of the $\mathcal{A}v$ -model	95
5.5.4	Results of the $\mathcal{A}v \star \mathcal{I}n$ -model	97
5.5.5	Conclusions	98
5.5.6	Pedestrian Field-Lines	99
5.6	Summary	102
6	Classification and Validation of Models	105
6.1	General Form of the Considered Models	107
6.2	Social-Force Models	108
6.2.1	Elliptical Specifications	109
6.2.2	Explicit Collision Prediction	112

6.2.3	Rotated Forces	113
6.2.4	Moussaid	114
6.3	Algebraic-Distance Models	116
6.3.1	Centrifugal-Force Model	116
6.3.2	Generalized Centrifugal-Force Model	118
6.4	Collision-Free Speed Model	119
6.4.1	Anticipation in the Collision-Free-Speed Model	120
6.5	Time-to-Collision Based Models	121
6.5.1	Power-Law Model	122
6.5.2	Velocity Obstacle Model	123
6.5.3	Reciprocal Velocity Obstacles	124
6.5.4	ORCA Model	125
6.5.5	ORCA and Density Dependent Behaviour	126
6.6	Granular Model	127
6.7	Multi-Agent Simulations	128
6.8	Summary	130
6.8.1	Relation to Scaling Analysis	133
7	Conclusions	135
	Afterword	139
A	The Fundamental Diagram of the Social-Force Model	140
B	The Harmonic Oscillator	143
C	Linear Stability Analysis	145
D	Spin Off: Merging Operational and Tactical Level	148
	Bibliography	155
	Erklärung	176
