<b>Acknowledgments</b>	<b>i</b>
<b>Abstract</b>	<b>iii</b>
<b>Zusammenfassung</b>	<b>v</b>
<b>List of publications</b>	<b>vii</b>
<b>Conference Contributions</b>	<b>ix</b>
<b>List of Symbols</b>	<b>xi</b>
<b>1. Introduction</b>	<b>1</b>
<b>2. Topological spin textures: Skyrmions and merons</b>	<b>9</b>
2.1. Origin of magnetism . . . . .	9
2.2. Skyrmions . . . . .	11
2.2.1. Topological definition of skyrmions . . . . .	11
2.3. Magnetic interactions in atomistic models . . . . .	15
2.3.1. Exchange interaction . . . . .	15
2.3.2. Spin-orbit coupling induced magnetic interactions . . . . .	16
2.3.3. Zeeman Energy . . . . .	18
2.4. The extended Heisenberg Hamiltonian . . . . .	19
<b>3. Multi-scale modelling – DFT in combination with atomistic spin dynamics</b>	<b>21</b>
3.1. The many-body Schrödinger equation . . . . .	22
3.2. Born-Oppenheimer approximation . . . . .	22
3.3. Density functional theory . . . . .	23
3.3.1. Hohenberg-Kohn theorems . . . . .	23
3.3.2. Kohn-Sham equations . . . . .	24
3.3.3. Exchange-correlation energy . . . . .	25
3.4. <i>Ab initio</i> method I: Plane waves basis and pseudo-potentials (Quantum Espresso)	27
3.4.1. Plane waves . . . . .	27
3.4.2. Quantum Espresso . . . . .	28
3.5. <i>Ab initio</i> method II: Korringa-Kohn-Rostoker Green function method (KKR)	29
3.5.1. Definition and general properties of a Green function . . . . .	29

3.5.2. Full potential . . . . .	32
3.5.3. Green function for free electrons . . . . .	34
3.5.4. Single site problem . . . . .	35
3.5.5. Multiple scattering theory . . . . .	36
3.5.6. Energy integration . . . . .	37
3.5.7. Spin-orbit coupling in KKR . . . . .	38
3.5.8. KKR self-consistent cycle . . . . .	39
3.6. Mapping procedure from <i>ab initio</i> of interaction parameters of an extended Heisenberg Hamiltonian . . . . .	40
3.6.1. Infinitesimal rotations method for calculating magnetic interactions . . . . .	40
3.6.2. Extraction of the magnetocrystalline anisotropy energy . . . . .	43
3.7. Atomistic Spin dynamics . . . . .	44
3.7.1. Landau-Lifshitz-Gilbert equation (LLG) . . . . .	44
3.7.2. Geodesic nudged elastic band method (GNEB) . . . . .	45
3.7.3. Monte Carlo (MC) simulations . . . . .	46
<b>4. Intrinsic AFM skyrmions in Cr films interfaced with PdFe/Ir(111)</b>	<b>49</b>
4.1. Introduction . . . . .	49
4.2. Computational details . . . . .	50
4.2.1. First-principles calculations . . . . .	50
4.2.2. Hamiltonian model and atomistic spin dynamics . . . . .	52
4.3. RW-AFM state and emergence of intrinsic AFM skyrmions . . . . .	53
4.4. Elucidating the stabilization mechanisms of interchained AFM skyrmions . . . . .	57
4.5. Impact of magnetic field . . . . .	60
4.6. Stabilization mechanism for single AFM skyrmions . . . . .	61
4.7. Phase diagrams . . . . .	64
4.8. Thermal stability with geodesic nudged elastic band (GNEB) method . . . . .	65
4.9. Conclusion . . . . .	67
<b>5. Spin model for intrinsic AFM skyrmions</b>	<b>69</b>
5.1. Introduction . . . . .	69
5.2. Computational details . . . . .	70
5.3. Minimal generic model for the RW-AFM state and emergence of AFM skyrmions . . . . .	70
5.4. Phase diagrams of the AFM skyrmions in a hexagonal lattice . . . . .	71
5.5. The shape of the AFM skyrmions . . . . .	71
5.6. Response to an external OOP magnetic field . . . . .	73
5.7. Effect of magnetic field on the thermal stability of single and double AFM skyrmions . . . . .	75
5.8. Conclusion . . . . .	76

---

<b>6. Intrinsic Néel AFM multi-meronic solitons</b>	<b>79</b>
6.1. Introduction . . . . .	79
6.2. Computational details . . . . .	79
6.3. Magnetic interactions and ground state of Mn-based thin films on Ir(111) . .	81
6.4. Topological magnetic states in frustrated Mn ultrathin films . . . . .	83
6.5. Stability against external magnetic fields . . . . .	86
6.6. Emergence mechanism of the frustrated multi-merons . . . . .	87
6.7. Conclusion . . . . .	89
<b>7. Current-driven dynamics of AFM skyrmions</b>	<b>91</b>
7.1. Introduction . . . . .	91
7.2. Computational details . . . . .	92
7.3. Trajectories of AFM skyrmions driven by perpendicular-to-plane currents . .	93
7.4. Directionality of the current-driven elliptical AFM skyrmions . . . . .	95
7.5. Thiele equation for elliptical AFM skyrmions . . . . .	96
7.6. Current-driven dynamics of AFM skyrmions interacting with FM skyrmions	98
7.7. AFM-FM skyrmion interaction profile . . . . .	100
7.8. Conclusion . . . . .	102
<b>8. Topological magnetism in diluted artificial adatom lattices</b>	<b>105</b>
8.1. Introduction . . . . .	105
8.2. Computational details . . . . .	106
8.3. Magnetic interactions among the magnetic adatoms on Nb(110) . . . . .	107
8.4. Complex magnetic states emerging at the two types of diluted adatom-lattices	111
8.5. Conclusion . . . . .	114
<b>9. Conclusions</b>	<b>117</b>
<b>A. Appendix for chapter 4</b>	<b>121</b>
<b>B. Appendix for chapter 5</b>	<b>127</b>
<b>C. Appendix for chapter 6</b>	<b>131</b>
<b>D. Appendix for chapter 7</b>	<b>135</b>
<b>Bibliography</b>	<b>140</b>
