Multi-scenario, high-resolution Lagrangian transport modeling for the analysis of the Asian tropopause aerosol layer

Jan Heinrich Clemens

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 648

ISSN 1866-1793

ISBN 978-3-95806-792-9

Contents

1	Introduction	1
2	The Asian tropopause aerosol layer	6
2.1	Surface air pollution and emissions in Asia	7
2.2	Transport within the Asian monsoon circulation	10
2.3	Composition and chemistry of the ATAL	13
2.4	Climate response to Asian aerosol and trace gases	16
3	Lagrangian transport modeling	18
3.1	Coordinate systems	19
3.2	Integration schemes	21
3.3	Grid interpolation	23
3.4	Parameterizations	24
4	Reanalysis data & models	27
4.1	ECMWF reanalysis	27
4.2	The Lagrangian transport models MPTRAC and CLaMS	28
4.3	High-performance Lagrangian transport modelling	30
4.4	Implementation of diabatic transport into MPTRAC	32
5	Evaluation of diabatic advection in MPTRAC	39
5.1	Diagnostics to evaluate the diabatic transport in MPTRAC	41
5.2	Results of the evaluation	45
5.2.1	Examples of trajectories and transport deviations	45

5.2.2	Transport uncertainties over 1 day	47
5.2.3	Uncertainty growth during 90 day forward calculations	53
5.2.4	Air parcel distribution on seasonal timescales	56
5.2.5	Differences between diabatic and kinematic calculations	60
5.2.6	Conservation of dynamical tracers in the stratosphere	62
5.3	Conclusions	64
6	Source regions of the Asian tropopause aerosol layer on the Indian subcontinent	67
6.1	Data and methods	68
6.1.1	COBALD aerosol measurements	68
6.1.2	Simulation scenarios	70
6.1.3	Classification of air parcel origin	71
6.2	Results	73
6.2.1	Transport pathways from source regions to the measured ATAL . . .	73
6.2.2	Scenario intercomparison of contributions from source regions and related transport pathways	76
6.2.3	Scenario intercomparison of the temporal evolution of transport from the MBL to the measured ATAL	81
6.2.4	Backscatter changes associated with changes in the transport and source regions	84
6.3	Discussion and conclusions	88
7	Summary	91
A	The Asian tropopause aerosol layer	96
B	Performance optimization of Lagrangian transport calculations	98
B.1	Performance analysis of netcdf format, compression and chunking options .	100
B.2	Optimization experiments with parallel IO and the MPI-3 shared memory model in CLaMS	101

B.3	Conclusions	103
C	Evaluation of diabatic advection in MPTRAC	104
C.1	Circulation in the UTLS	105
D	Source regions of the Asian Tropopause Layer on the Indian subcontinent	106
D.1	Definition of source regions	106
D.2	Transport pathways from source regions	107
D.3	PDF for different scenarios	109
D.4	PDF differences for different scenarios	110
D.5	Correlation to all regions	111
D.6	Sensitivity tests for simulations employing the ECP	114
	List of figures	115
	List of tables	117
	List of abbreviations	118
	List of symbols	120
	Bibliography	121
