Biodegradation and microbial upcycling of plastics

Jan de Witt

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 289

ISSN 1866-1807

ISBN 978-3-95806-804-9

Contents

Publications	I
List of abbreviations	IV
List of figures	VIII
List of tables	XI
Contents	XII
Summary	XV
Zusammenfassung	XVI
1. Introduction	1
1.1 From natural polymers to synthetic plastics	1
1.2 The global plastic crisis	5
1.3 Conventional end-of-life solutions for plastic waste.....	7
1.4 Towards a sustainable plastics economy	11
1.4.1 Enzymatic depolymerization of plastics and coatings	14
1.4.2 Microbial metabolism of plastic monomers and oligomers	18
1.4.3 Microbial upcycling of plastics.....	20
1.5 <i>Pseudomonas putida</i> KT2440 – a biotechnological chassis for plastic upcycling	23
1.6 Aim and scope of the thesis	30
2. Publications and manuscripts	31
2.1 Microbial upcycling of polyamides using engineered <i>Pseudomonas putida</i>	33
2.1.1 Graphical abstract.....	34
2.1.2 Abstract.....	34
2.1.3 Introduction.....	35
2.1.4 Results	37
2.1.5 Discussion.....	50
2.1.6 Materials and methods.....	52
2.1.7 Declaration of competing interest	56
2.1.8 Acknowledgements	57

2.2	Increasing the diversity of nylonases for polyamide degradation	59
2.2.1	Abstract	60
2.2.2	Introduction	61
2.2.3	Results and discussion	63
2.2.4	Conclusions and outlook	75
2.2.5	Materials and methods	75
2.2.6	Declaration of competing interest	80
2.2.7	Acknowledgements	80
2.3	Bio-upcycling of even and uneven medium-chain-length diols and dicarboxylates using engineered <i>Pseudomonas putida</i>	81
2.3.1	Graphical abstract	82
2.3.2	Abstract	82
2.3.3	Introduction	83
2.3.4	Results and discussion	85
2.3.5	Conclusions	101
2.3.6	Materials and methods	101
2.3.7	Availability of data and materials	105
2.3.8	Competing interests	105
2.3.9	Acknowledgements	106
2.4	Characterization and engineering of branched short-chain dicarboxylate metabolism in <i>Pseudomonas</i> reveals resistance to fungal 2-hydroxyparaconate	107
2.4.1	Highlights	108
2.4.2	Graphical abstract	108
2.4.3	Abstract	109
2.4.4	Introduction	110
2.4.5	Results and discussion	113
2.4.6	Conclusion and outlook	128
2.4.7	Materials and methods	129
2.4.8	Declaration of competing interests	132
2.4.9	Acknowledgements	132
2.4.10	Addendum	133

2.5 Biodegradation of poly(ester-urethane) coatings by <i>Halopseudomonas formosensis</i>	137
2.5.1 Graphical abstract.....	138
2.5.2 Abstract.....	138
2.5.3 Introduction.....	139
2.5.4 Results and discussion.....	141
2.5.5 Conclusion and outlook.....	154
2.5.6 Materials and methods.....	154
2.5.7 Conflict of interest statement.....	159
2.5.8 Data availability statement	159
2.5.9 Acknowledgements	160
3. General discussion and outlook.....	161
3.1 Plastic-degrading enzymes – big steps ahead	161
3.2 Metabolic engineering enables biological funneling of plastic hydrolysates by <i>P. putida</i> KT2440	164
3.3 The future of microbial upcycling: A sustainable approach to plastic waste management	166
4. References	171
5. Appendix.....	199
5.1 Supplementary data to Chapter 2.1:	199
5.2 Supplementary data to Chapter 2.2:	215
5.3 Supplementary data to Chapter 2.3:	219
5.4 Supplementary data to Chapter 2.4:	225
5.5 Supplementary data to Chapter 2.5:	237
Table S1. Strains used in this thesis.	244
Table S2. Plasmids used in this thesis	249
Table S3. Oligonucleotides used in this thesis.....	252
Danksagung	257
Eidesstattliche Erklärung.....	259
